Shipston on Stour Landscape Sensitivity to Commercial Development

LCP/Zone Sh01 Settlement: Shipston on Stour

Landscape sensitivity to housing development

The zone forms part of a relatively tranquil rural river corridor landscape, associated with the narrow, alluvial floodplain of the River Stour. Although much of the former wet grassland vegetation has now been improved, the river channel itself still retains a biologically rich wetland habitat. The river is prone to flooding after prolonged periods of heavy rainfall, when much of the alluvial corridor can be inundated by water. The area is predominantly open and defines the edge of the settlement including the Conservation Area to the south west. Housing development would be highly inappropriate due to its effect on the floodplain, openness, rural character and crossing a strong natural boundary.

# Landscape sensitivity to commercial development high

The zone forms part of a relatively tranquil rural river corridor landscape, associated with the narrow, alluvial floodplain of the River Stour. Although much of the former wet grassland vegetation has now been improved, the river channel itself still retains a biologically rich wetland habitat. The river is prone to flooding after prolonged periods of heavy rainfall, when much of the alluvial corridor can be inundated by water. The area is predominantly open and defines the edge of the settlement including the Conservation Area to the south west. Commercial development would be highly inappropriate due to its effect on the floodplain, openness, rural and settlement character and crossing a strong natural boundary.

LCP/Zone Sh02 Settlement: Shipston on Stour

Landscape sensitivity to housing development

This zone forms part of a relatively tranquil, pastoral, river corridor landscape, associated with the narrow, alluvial floodplain of the River Stour. Patches of wet grassland vegetation are features in places and the river channel itself still retains a biologically rich wetland habitat. The river is prone to flooding after prolonged periods of heavy rainfall, when much of the alluvial corridor can be inundated by water. The area is more enclosed than to the north but forms part of the eastern approaches to the settlement and defines the built edge including the Conservation Area. The area also contributes to the setting of Barcheston to the south and helps separate it from Shipston. Housing development would be highly inappropriate due to its effect on the floodplain, openness, rural character and crossing a strong natural boundary.

### Landscape sensitivity to commercial development high

This zone forms part of a relatively tranquil, pastoral, river corridor landscape, associated with the narrow, alluvial floodplain of the River Stour. Patches of wet grassland vegetation are features in places and the river channel itself still retains a biologically rich wetland habitat. The river is prone to flooding after prolonged periods of heavy rainfall, when much of the alluvial corridor can be inundated by water. The area is more enclosed than to the north but forms part of the eastern approaches to the settlement and defines the built edge including the Conservation Area. The area also contributes to the setting of Barcheston to the south and helps separate it from Shipston. Commercial development would be highly inappropriate due to its scale, effect on the floodplain, openness, rural character and crossing a strong natural boundary.

# Landscape sensitivity to housing development

The zone consists of well used allotments, sports fields and facilities and a meadow

associated with a dwelling on the lower valley slopes and floor of the River Stour, east of the settlement. There is a strong riparian corridor with trees and glimpse views are possible to the opposite valley side although the area feels enclosed. The area feels guiet as there are no roads although houses overlook this green corridor. The sensitivity lies in the river corridor of the River Stour, the positive use of the area by the community and the area's function in separating the settlement from Barcheston. Housing development would affect the floodplain, erode the green corridor, remove sport uses and reduce openness and is considered inappropriate.

#### Landscape sensitivity to commercial development high

LCP/Zone Sh04 Settlement: Shipston on Stour

Landscape sensitivity to housing development

This zone is an area of rolling landform comprising the eastern sides of the River Stour valley and open arable farmland that has lost most of its historic field pattern. It is therefore generally a very open landscape where any new development would be very visible. The zone also has a strong rural character which is reinforced by the fact that Shipston is situated entirely to the west of the River Stour. Shakespeare's Way runs through the area with views to the church tower. Any expansion of the town with housing development to the east of the river would thus strongly detract from this rural character and would be inappropriate.

#### Landscape sensitivity to commercial development high

This zone is an area of rolling landform comprising the eastern sides of the River Stour valley and open arable farmland that has lost most of its historic field pattern. It is therefore generally a very open landscape where any new development would be very visible. The zone also has a strong rural character which is reinforced by the fact that Shipston is situated entirely to the west of the River Stour. Shakespeare's Way runs through the area with views to the church tower. Any expansion of the town with commercial development to the east of the river would thus strongly detract from this rural character and would be inappropriate. The current depot should not act as a precedent for other development.

# Landscape sensitivity to housing development

The zone comprises the eastern sides of the River Stour valley and is a pastoral landscape with

a strong hedgerow network and a reasonable cover of scattered hedgerow and mature garden trees, the latter mainly around the village of Barcheston with its listed buildings. The area has a strong rural character acting as part of the setting for Barcheston and helping to separate it from Shipston. Any expansion of the town with housing development to the east of the river would strongly detract from the rural character and would be inappropriate.

LCP/Zone Sh06 Settlement: Shipston-on-Stour Landscape sensitivity to housing development high/medium

The zone consists of a campsite on the lower valley slopes of the River Stour, east of the settlement. There is a strong riparian corridor with trees to the east and glimpse views are possible to the opposite valley side although the area feels enclosed. The area feels quiet as there are no roads although houses overlook this green corridor. The sensitivity lies in the role of the area as part of the green valley corridor of the River Stour and the area's function in separating the settlement from Barcheston with its listed manor. Housing development would erode the green corridor and reduce openness.

#### Landscape sensitivity to commercial development high

The zone consists of a campsite on the lower valley slopes of the River Stour, east of the settlement. There is a strong riparian corridor with trees to the east and glimpse views are possible to the opposite valley side although the area feels enclosed. The area feels quiet as there are no roads although houses overlook this green corridor. The sensitivity lies in the role of the area as part of the green valley corridor of the River Stour and the area's function in separating the settlement from Barcheston with its listed manor. Commercial development would erode the green corridor and reduce openness as well as being out of scale and character with the valley floor and surrounding uses.

LCP/Zone Sh07 Settlement: Shipston-on-Stour

Landscape sensitivity to housing development

medium

The zone is a sloping grass field on the lower valley side of the River Stour at the southern edge of the settlement. New housing has recently been constructed to the north creating a raw edge and the cemetery with its listed chapels/spire and mature conifer trees lies to the south west, across the A3400 approach road to the settlement. A single dwelling lies to the south east. The site is visible from the east across the valley although is partly screened from Barcheston by intervening trees. Views from the A3400 are limited until close to the zone. The zone's sensitivity lie in its contribution to the setting of the cemetery and its proximity to Barcheston and its listed buildings. The cemetery and grounds are a positive feature and gateway to the settlement but lie on the opposite slopes of a minor ridge to the zone. Therefore, housing development in this zone may be acceptable if designed to minimise effects on the cemetery and its users and in views across the valley from Barcheston and its environs.

# Landscape sensitivity to commercial development high

The zone is a sloping grass field on the lower valley side of the River Stour at the southern edge of the settlement. New housing has recently been constructed to the north creating a raw edge and the cemetery with its listed chapels/spire and mature conifer trees lies to the south west, across the A3400 approach road to the settlement. A single dwelling lies to the south east. The site is visible from the east across the valley although is partly screened from Barcheston by intervening trees. Views from the A3400 are limited until close to the zone. The zone's sensitivity lie in its contribution to the setting of the cemetery and its proximity to Barcheston and its listed buildings. The cemetery and grounds are a positive feature and gateway to the settlement. Commercial development would be likely to affect this setting and due to its scale may adversely affect the setting of Barcheston and environs.

housing should address road A3400 positively being set back at a lower level while retaining hedge and adding trees; structure planting minimum 10m wide to southern boundary to screen housing from south; structure planting to north east and within development to mitigate effects on Barcheston and environs; avoid development of projection of the site towards valley floor to keep corridor of green space along valley bottom including campsite; access from existing development

LCP/Zone Sh08 Settlement: Shipston-on-Stour

Landscape sensitivity to housing development

high

The zone consists of cemetery and allotments on the slopes of a minor river tributary of the Stour. The cemetery chapels are listed and set within mature grounds with distinctive conifers. These combined form an important and distinctive local skyline and a positive entrance gateway to the settlement for travellers from the south. The allotments are well used and complement the cemetery as an intrinsically open, green space use. Housing development would be inappropriate due to the sensitive and community uses as well as the visual prominence of the cemetery.

# Landscape sensitivity to commercial development high

The zone consists of cemetery and allotments on the slopes of a minor river tributary of the Stour. The cemetery chapels are listed and set within mature grounds with distinctive conifers. These combined form an important and distinctive local skyline and a positive entrance gateway to the settlement for travellers from the south. B184

LCP/Zone Sh09 Settlement: Shipston-on-Stour

Landscape sensitivity to housing development

mediun

The zone is the farmed hill slopes of Hanson Hill and Waddon Hill rising to the west of the settlement. The area is mainly arable with some pastoral land and a disused factory near Mount Pleasant. Field boundaries are hedged with few trees except along a PROW linking the settlement to the hill and around the disused factory site. The area forms a prominent rural backcloth to the settlement which is apparent from the Shakespeare Way along the Stour valley and forms a generally positive approach along the B4035. The factory is well screened although glimpses of buildings are possible from the west. The sensitivity of the area lies primarily in its visual prominence as well as hedges and trees. Housing development no higher than two storeys could be accommodated discreetly below the break of slope [around 85mAOD] in only a few lower fields either side of the main PROW rising up the hill. New field boundaries with trees and public access would be needed as advance planting where fields are subdivided to provide adequate screening. Housing in the fields adjacent to the B4025 and to the south would be too prominent and would adversely affect the setting of, and approaches to, the settlement as a whole. Separation between Mount Farm and the settlement should also remain. Housing development could be accommodated in landscape screening terms within the disused factory site providing tree cover was retained and increased to the west and the heights of new housing did not exceed the current building heights. This may be unsatisfactory from the point of view of creating a positive relationship with the A4035 in terms of frontage and its location on a hilltop separate from the main settlement.

# Landscape sensitivity to commercial development high/medium

The zone is the farmed hill slopes of Hanson Hill and Waddon Hill rising to the west of the settlement. The area is mainly arable with some pastoral land and a disused factory near Mount Pleasant. Field boundaries are hedged with few trees except along a PROW linking the settlement to the hill and around the disused factory site. The area forms a prominent rural backcloth to the settlement which is apparent from the Shakespeare Way along the Stour valley and forms a generally positive approach along the B4035. The factory is well screened although glimpses of buildings are possible from the west. The sensitivity of the area lies primarily in its visual prominence as well as hedges and trees. Separation between Mount Farm and the settlement should also remain. Commercial development would be inappropriate due to this prominence, relationship with housing and the steep slopes. The only potential site is the existing factory and any development should not exceed the current height of buildings.

# Landscape sensitivity to housing development

high/medium and leisure centre are

These playing fields associated with school, sports club and leisure centre are located on the lower slopes Waddon Hill. They are bounded by housing to the south east, commercial development to the north east and countryside to the other sides along with strong hedgerows and trees. The school and sports club buildings are prominent features rising above the settlement, defining its upper limits. The sensitivity of the zone is in its location on the hillside and the prominence of any potential built form on it. Housing development is therefore considered to be inappropriate due to this and its current green uses which have community benefit.

# Landscape sensitivity to commercial development high/medium

LCP/Zone Sh12 Settlement: Shipston on Stour Landscape sensitivity to housing development high/medium

This zone is an area of intensively managed arable farmland with an historic pattern of medium-large sized regular fields, lying in an area of higher level rolling topography associated with Waddon Hill. It is an open landscape with a strong rural character with wide intervisibility to the east. The adjacent commercial estate has recognised this prominence with dark green units on its edge, but with a detractive larger recent builders merchant unit visible from the north and on the skyline in views from the east and south east. Adjacent housing is also prominent. Reinforcement of further built form on this edge is highly undesirable. Housing development is therefore considered inappropriate.

LCP/Zone Sh13 Settlement: Shipston on Stour

Landscape sensitivity to housing development

medium

This zone lies in an area of low lying ground between two hills on the northern edge of Shipston, where it is currently used by the local community for sporting and other recreational activities. It appears well used as an amenity resource although now has limited ecological and cultural intrinsic sensitivity as a result. It would be desirable to retain the recreational purpose if possible. Housing development would remove this use and would significantly extend the settlement form north, albeit at a low level. The area to the south, as far north as the existing housing edge to the west is less sensitive than the area to the north.

## Landscape sensitivity to commercial development high

This zone lies in an area of low lying ground between two hills on the northern edge of Shipston, where it is currently used by the local community for sporting and other recreational activities. It appears well used as an amenity resource although now has limited ecological and cultural intrinsic sensitivity as a result. It would be desirable to retain the recreational purpose if possible. Commercial development would remove this use and would significantly extend the development form north, abutting and accessed through housing. It is therefore considered to be inappropriate in this location.

LCP/Zone Sh14 Settlement: Shipston-on-Stour

## Landscape sensitivity to housing development

The zone consists of a small rounded hill on the edge of the valley floor with pasture including ridge and furrow and horse pasture. Hedges are gappy and generally outgrown with trees. The hill defines the northern edge of the settlement, screening it from wider view from the north. Adjacent recent housing rises up the hill slopes and creates an awkward termination to the settlement especially when viewed from sensitive views such as from Shakespeare Way to the east. This precedent is unfortunate and undesirable. It is likely to lead to pressure to extend housing either side to this level. It is considered that development to the north and east of the new current development is unacceptable due to its exposure to views from the east making development even more prominent. Development within the field to the west is visible to less sensitive receptors and so, while undesirable, may be justifiable. This is with the strong proviso that no development should be higher than the existing housing [ideally lower] and should not be located higher up the slope than 75mAOD, whichever is lower. The top of the field [to the north and north eastern corner] should be planted with native trees

with access to provide a permanent soft termination to the settlement edge and reinforce the

high/medium

## Landscape sensitivity to commercial development high

The zone consists of a small rounded hill on the edge of the valley floor with pasture including ridge and furrow and horse pasture. Hedges are gappy and generally outgrown with trees. The hill defines the northern edge of the settlement, screening it from wider view from the north. Adjacent recent housing rises up the hill slopes and creates an awkward termination to the settlement especially when viewed from sensitive views such as from Shakespeare Way to the east. This precedent is unfortunate and undesirable. Commercial development is considered inappropriate in this area as the hill provides an important visual stop to the northern edge of the settlement and it would be out of scale with the grain of the field pattern and the slope.

LCP/Zone Sh15 Settlement: Shipston on Stour

Landscape sensitivity to housing development

high

This zone comprises of gently rolling topography with open arable farmland that forms part of the rural countryside to the north of the settlement. At no point does it abut the settlement edge. The area has a strong rural character which is reinforced by the fact that Shipston lies mostly beyond a low hill to the south. Housing development would therefore be inappropriate in this area.

# Landscape sensitivity to commercial development high

This zone comprises of gently rolling topography with open arable farmland that forms part of the rural countryside to the north of the settlement. At no point does it abut the settlement edge. The area has a strong rural character which is reinforced by the fact that Shipston lies mostly beyond a low hill to the south. Commercial development would therefore be highly inappropriate in this area.

LCP/Zone Sh16 Settlement: Shipston-on-Stour

## Landscape sensitivity to housing development

high/medium

The zone consists of the lower sloping valley sides of the River Stour forming a gentle spur which closes off views of the settlement to the north. The area is mainly pastoral with some arable in small-medium sized fields with outgrown hedges and fenced boundaries. There is evidence of some ridge and furrow. The A3400 forms the western boundary of the area, screened by a thick hedge and a PROW- Centenary Way, links the settlement to the wider countryside and to listed mills to the north east. The housing to the south is relatively recent and forms a strong, abrupt edge to the settlement. A locally prominent single 20c house lies just along the road separated from the settlement. The sensitivity of the area lies in its highly rural open character which contributes to the open green valley corridor, screening the settlement from the north. Ridge and furrow is also relatively rare and of intrinsic value. Housing development is considered inappropriate as the area forms part of a wider open rural valley landscape and any development would clearly extend the settlement when viewed from the east [including the Shakespeare Way]. The least sensitive part of the zone is the field adjacent to the settlement edge due to its relative enclosure although it does have ridge and furrow.

## Landscape sensitivity to commercial development high

The zone consists of the lower sloping valley sides of the River Stour forming a gentle spur which closes off views of the settlement to the north. The area is mainly pastoral with some arable in small-medium sized fields with outgrown hedges and fenced boundaries. There is evidence of some ridge and furrow. The A3400 forms the western boundary of the area, screened by a thick hedge and a PROW- Centenary Way, links the settlement to the wider countryside and to listed mills to the north east. The housing to the south is relatively recent and forms a strong, abrupt edge to the settlement. A locally prominent single 20c house lies just along the road separated from the settlement. The sensitivity of the area lies in its highly rural open character which contributes to the open green valley corridor, screening the settlement from the north. Ridge and furrow is also relatively rare and of intrinsic value. Commercial development is considered inappropriate as the area forms part of a wider open rural valley landscape and any development would be clearly apparent when viewed from the east [including the Shakespeare Way], as well as removing ridge and furrow, albeit the latter is in a more enclosed area.
