1. INTRODUCTION

- 1.1 The Ilmington Neighbourhood Development Plan (The Plan) has been developed on behalf of Ilmington Parish Council by a group of Ilmington residents who volunteered to participate in the Neighbourhood Plan Steering Group.
- 1.2 It sets out a vision and policies that have been formulated after extensive evidence gathering and analysis between 2015 and 2017. This included a Neighbourhood Area-wide household survey, consultation workshops, independent planning assessments, public meetings and extensive research into existing documentation.
- 1.3 This Plan is based on the community's views. The Neighbourhood Area-wide survey, itself, had an exceptionally high return of 60% of households. It identifies what facilities and services the people of the Parish of Ilmington want to be improved and how they believe the character of the Parish should be preserved. It recognises that the Parish has to keep developing as it has over the last 40 years but that this should be in a managed and controlled way.
- 1.4 The Plan will be an important and influential document for Stratford-on-Avon District Council, developers and Ilmington residents alike, and will ensure that the village and Parish continues to develop in a manner which best meets the wishes and aspirations of all interested parties.

2. THE ROLE OF THE NEIGHBOURHOOD DEVELOPMENT PLAN

- 2.1 Neighbourhood development plans are part of the land use planning process, established under the Localism Act 2011. Their aim is to give local people more say in the future of where they live.
- 2.2 After two stages of consultation, the adoption process requires examination by an independent Examiner and a Parish referendum. Once endorsed by the community at referendum and 'made' by Stratford-on-Avon District Council, the Plan will become part of the statutory development plan for the local area, sitting alongside the Stratford on Avon District Core Strategy 2011 - 2031¹ (the Core Strategy). Planning applications for development in the Neighbourhood Area must then be determined in accordance with the approved Neighbourhood Development Plan², unless material considerations indicate otherwise.
- 2.3 The Plan gives residents a say in how the Neighbourhood Area should evolve up to 2031 and in planning and development over that period. Without it, the local community will have less influence over any development which takes place within the Neighbourhood Area. The Plan can:
 - Set out where new homes and other developments may be built
 - Influence the type and design of development
 - Identify and protect important local assets and green spaces
 - Help identify the facilities and services essential to our growing community
- 2.4 The Plan is in conformity with the Core Strategy and follows its strategic policies.
- 2.5 The Core Strategy states that the 10 villages such as Ilmington (known as Category 3 Local Service Villages) should accommodate approximately 450 new houses of which no more than around 13% should be provided in any individual settlement. To date, within the Parish of Ilmington, 21 have been built or have planning permission.
- 2.6 Stratford on Avon District Council must be able to demonstrate a sufficient 5 year housing land supply. If this cannot be demonstrated, i.e. that sufficient houses are not being built, then relevant policies in the Core Strategy and the Neighbourhood Plan will be deemed 'out-of-date' and under the provisions of the National Planning Policy Framework paragraph 14, the presumption in favour of sustainable development would apply.
- 2.7 A Parish with a 'made' Neighbourhood Development Plan which plans positively towards development puts itself in a stronger position in dealing with speculative development which could otherwise be difficult to resist if it did not have a Neighbourhood Development Plan.
- 2.8 The exact number of houses allocated in the Neighbourhood Development Plan will depend on how many can be accommodated in a sustainable way having regard to environmental constraints.

¹ Stratford-on-Avon District Core Strategy 2011 – 2031.

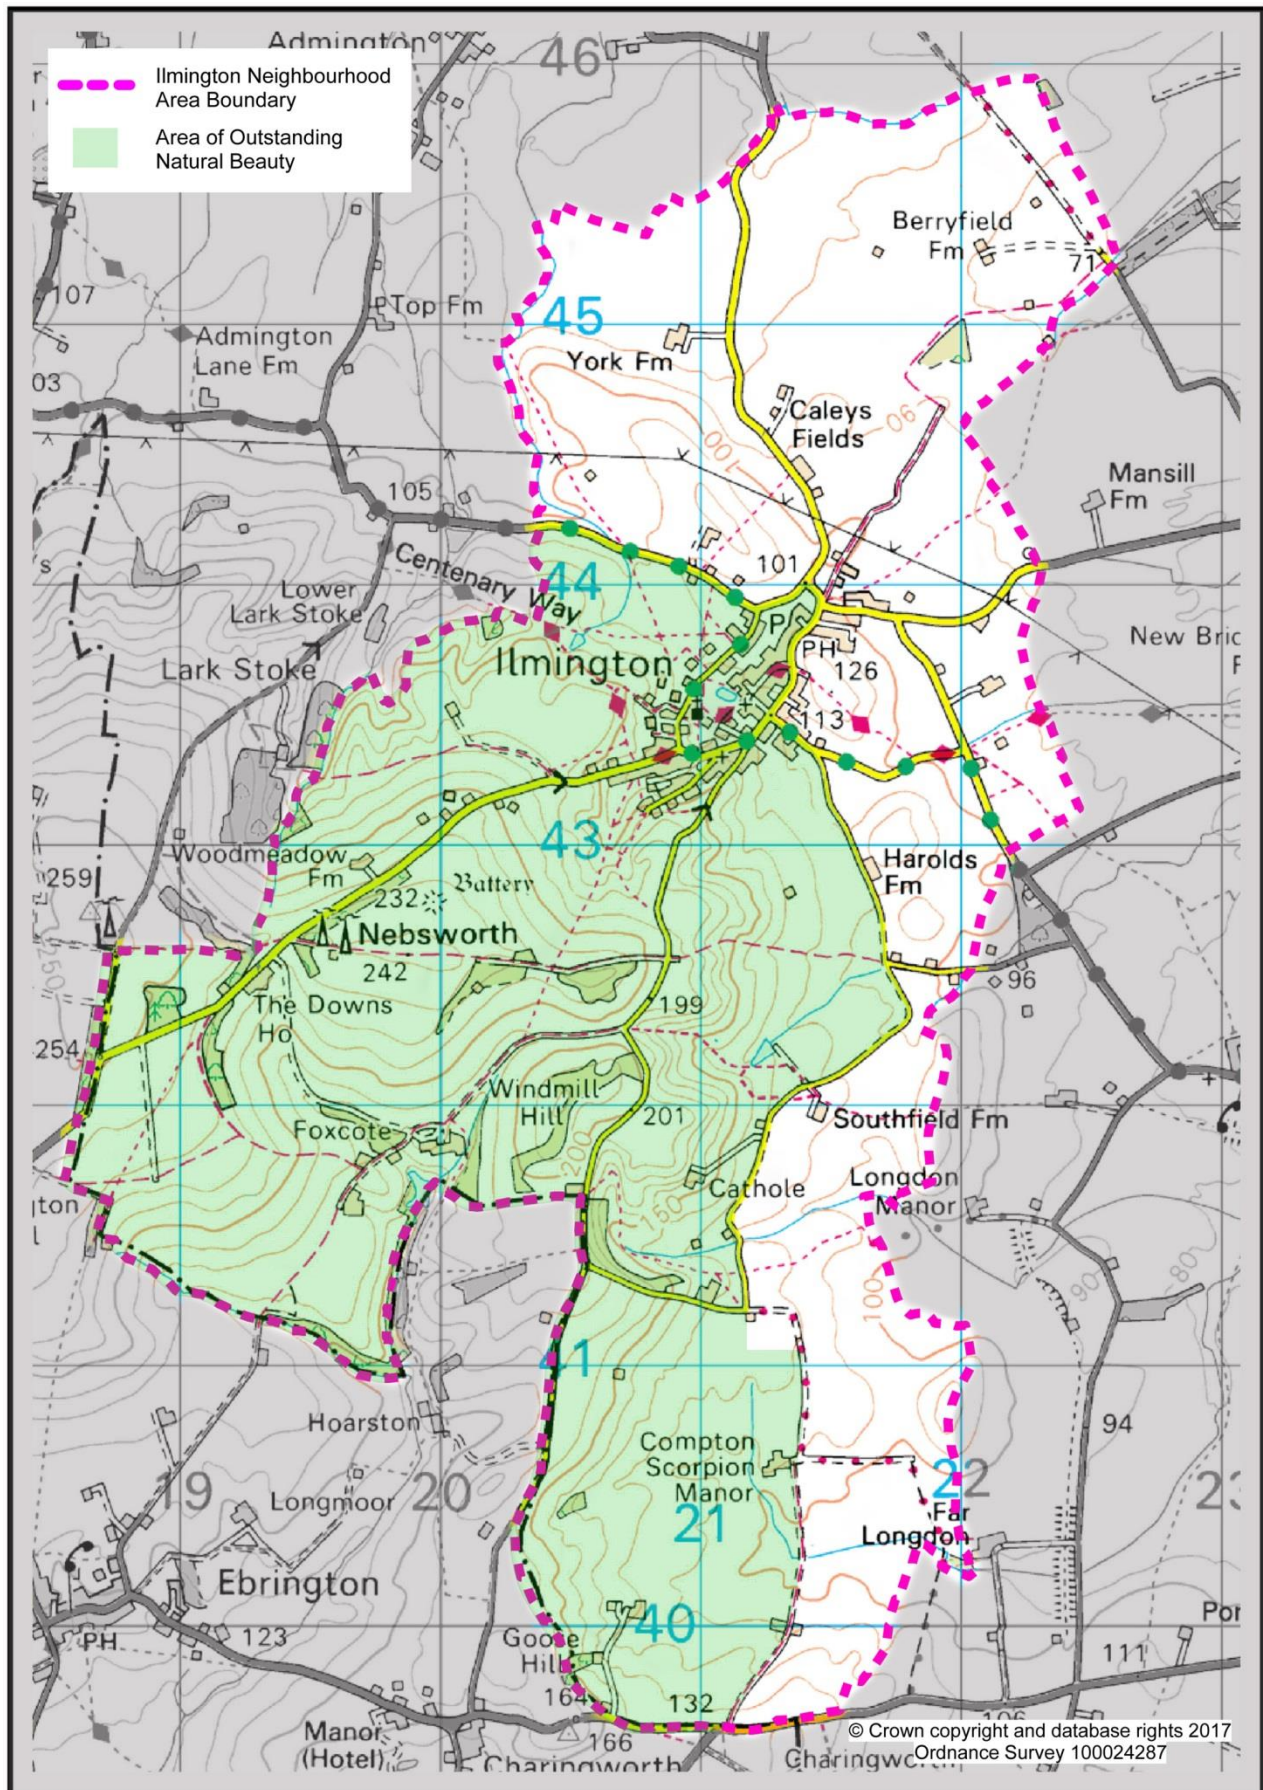

² Planning and Compulsory Purchase Act 2004 (Section 38 (6))

- 2.9 The Core Strategy is subject to a cyclical review (usually every 5 years). It is therefore important to ensure that a review of the Neighbourhood Development Plan takes place at similar intervals. This will also ensure that the Plan is up-to-date with national planning policy.
- 2.10 The Plan is designed to allow the village to develop through thoughtful and sympathetic housing growth and development whilst contributing to the District's housing target and meeting the housing needs of the community. It also aims to achieve a key balance between conserving Ilmington's many qualities such as valued landscapes and its heritage, and securing the necessary infrastructure needed to support development in the Neighbourhood Area.
- 2.11 All Plan policies have been formed having regard to the adopted Core Strategy which has been subject to a Sustainability Appraisal and a Habitat Regulations Assessment.
- 2.12 A Neighbourhood Plan must also have appropriate regard to national policy, including:
- The National Planning Policy Framework³ and related Planning Practice Guidance advice.
 - The Cotswolds Area of Outstanding Natural Beauty Management Plan 2013-18 (endorsed in the Core Strategy) ⁴ which provides essential guidance as a significant part of the Parish and village of Ilmington lie within the designation; and
 - Specific historic environment where Core Strategy policies apply⁵ as much of the village is within a Conservation Area (see Figure 1).
- 2.13 The whole Parish of Ilmington has been formally designated as the Neighbourhood Area through an application to, and approval from, Stratford-on-Avon District Council (see Figure 1).

³ National Planning Policy Framework 2012 (as subsequently amended)

3. THE VILLAGE AND PARISH OF ILMINGTON

View from Foxcote Hill across the village of Ilmington

3.1 Ilmington Parish

- 3.1.1. Ilmington is the only substantive settlement in the Neighbourhood Area. It is a north-Cotswold fringe village that nestles at the foot of the Ilmington Downs which form a horseshoe shaped bowl that open northwards into the flatter Warwickshire Feldon (Feld is an old English term meaning 'open cleared land'). The Parish is a gateway to the Cotswolds from the north.
- 3.1.2. The absence of large scale development or major traffic routes combined with many long-distance views creates a sense of tranquility across the Neighbourhood Area, including in the Area of Outstanding Natural Beauty.
- 3.1.3. The Neighbourhood Area is crossed by many footpaths, including the long-distance Centenary Way. These are widely used and enjoyed by the many local and visiting walkers and cyclists who value the Neighbourhood Area's scenic beauty and valued landscapes.

3.2 History

- 3.2.1. The historic importance of the village of Ilmington is recognised by Stratford-on-Avon District Council who have made the core area one of historic high sensitivity.⁶ Most development proposed within this area requires an archaeological survey before planning decisions are made.

⁶ Historic Environment Assessment of Local Service Villages, Stratford-on-Avon District 2012, AOC Project No: 32127. Section 4.16 HEA 16: Ilmington

- 3.2.2. The settlement of Ilmington has ancient roots. A survey⁷ in 2014 identified evidence of a late Iron Age farmstead on Windmill Hill, in addition to other evidence of occupation into the Roman period (Figure 2).

FIGURE 5: LIDAR DSM, SHOWING TOPOGRAPHIC LOCATION OF SITE.
Geophysical Survey data overlain on LIDAR DSM (ASCII and JPG data from Geomatics Group). Viewed from W, 1.8x vertical exaggeration.

Figure 2: Image showing the position of an Iron Age Farmstead⁸

- 3.2.3. The Parish of Ilmington is an irregular elongated shape stretching from the Feldon in the north to Compton Scorpion in the south. It follows ancient bounds first recorded in the Anglo Saxon charters of the adjoining parishes of Tredington, Blackwell and Far Longdon.
- 3.2.4. The centre of Ilmington village was originally an Anglo-Saxon farming settlement and is recorded in the Domesday Survey of 1086 as having a manor with three ploughs and a church with a priest.
- 3.2.5. The medieval core of Ilmington is centred on Middle, Back and Front Streets. Houses and farms fronted onto Middle Street with rectilinear plot divisions running to Back and Front Street: these plots were burgages (land granted in return for services or for a rent). Middle Meadow (see Figure 3) is the last surviving intact burgage plot.

Figure 3: Middle Meadow, Ilmington's Last Remaining Burgage Plot

- 3.2.6. The wider Neighbourhood Area contains extensive open fields with characteristic ridge and furrow. The Warwickshire Historic Environment Record⁹ notes surviving ridge and furrow to the north east of Ilmington, around the Old Rectory and York Farm, and to the south west of the village. These open fields were enclosed from 1781¹⁰ creating a landscape of dispersed farms.
- 3.2.7. There is a scheduled monument¹¹ to the north of Pig Lane marked on Ordnance Survey maps as the “Battery”. This rectangular earthwork is understood to be the site of an English Civil War gun emplacement commanding a strategic position.
- 3.2.8. The present Manor in Ilmington was built in the 17th Century but an earlier Manor was situated in Berry Orchard with the Fish Ponds possibly acting as its’ moat. In the post-medieval period, the village expanded up the lower slopes of the Ilmington Downs in a more random fashion. The 17th and 18th Centuries were prosperous (particularly as a result of the wool trade) with some substantial stone houses built such as the Manor, Crab Mill and the Dower House.
- 3.2.9. Groups of more modest cottages in the Cotswold vernacular style were also constructed and the older farmhouses rebuilt in stone. In the 19th Century, the population had “a rapid increase up to 1861 after which there was a dramatic fall so that by 1910 the community was little more than half the size that it was in 1861.”¹²
- 3.2.10. The 20th Century saw expansion with the provision of the village hall, the present infant and junior school, sports facilities at the playing fields and post-World War 2 social housing: the latter extending the village beyond its core to the north and east.
- 3.2.11. Well over half the Neighbourhood Area, and most of Ilmington village, apart from 20th Century expansion, is within the Cotswold Area of Outstanding Natural Beauty (see Figure 2). Outside the village, the Neighbourhood Area is sparsely developed and populated, and retains a distinctive historic rural character. The community is actively engaged in landscape conservation and improvement in the Neighbourhood Area, with recent activity including:
- Work by volunteer Cotswold wardens with local farmers and villagers to repair stone walls, plant trees and hedges and maintain footpaths including installing accessible gates and bridges over streams.
 - The Parish Council and others planting oak trees to commemorate the millennium and to restore the Parish tree scape to address the severe impact of Dutch elm disease 40 years ago.
 - The Foxcote estate planting some 50,000 trees, restoring miles of traditional hedgerows, creating insect friendly field side verges, and renovating traditional farm buildings¹³.

¹³ Ilmington Parish Plan 2006, p.5

3.3 Ilmington Today

- 3.3.1. The 2011 Census¹⁴ identified a Parish population of 712. Consistent with the fact that there has been significant development since the Census, the 2016 population estimates¹⁵ suggest a population of around 740 with an estimated age distribution in 2016 shown in Figure 4 below:
- 3.3.2. Ilmington is a vibrant and active village that is a social hub for the Neighbourhood Area and surrounding villages with many active clubs and organized activities such as art and yoga classes, a Wednesday Club for senior citizens, cinema and sports clubs, 20:20 and Defibrillator groups and a Horticultural Society. As the sole significantly sized settlement in the Neighbourhood Area, Ilmington also provides a wide range of amenities that include many footpaths and cycling routes, substantial playing fields, a village hall, school, shop and café, two pubs, St Mary's Church, several significant and valued green spaces, and a mobile library.

Age Band	%
0-9 Years	9.6%
10-19 Years	8.8%
20-29 Years	6.8%
30-39 Years	7.2%
40-49 Years	9.9%
50-59 Years	19.1%
60-69 Years	15.9%
70-79 Years	13.9%
80+ Years	8.8%

4. VILLAGE CHARACTER APPRAISAL

Ilmington Parish Settlement Pattern and Character

- 4.1. The village of Ilmington has a unique character derived from the landscape setting, the variety of building materials and styles, a wealth of heritage assets, the mosaic of buildings, open areas and an intimate network of footpaths and lanes lined with low drystone walls and low hedges that thread through the village. The surrounding hills provide a dramatic backdrop and there are many vistas into, out of and across the village.

The Fountain, Upper Green

- 4.2. Ilmington is of considerable architectural and historic interest with 40 of the 61 listed buildings in the Neighbourhood Area sited in the village. St Mary's Church is Grade I status, the Manor and 'Stonecrop' have Grade II* status with the remainder are Grade II. In addition to listed buildings, heritage assets include: distinctive features, such as the war memorial, the monument to the arrival of fresh drinking water, the fountainheads, the replica stocks, gates and gate piers. These contribute to the historic interest, architectural richness and sense of place that help to define Ilmington's special character.

- 4.3. This special character was recognised by the designation of the Ilmington Conservation Area (CA) in 1969 (adjusted in 1995) which covers most of the village apart from areas of post-war housing, (see Figure 2).

- 4.4. The remaining 21 listed buildings in the Neighbourhood Area are outside Ilmington village, including Foxcote House, which is listed at Grade II* and a fine example of a country house set in parkland with woodland, drives and a lake.

Foxcote House

- 4.5. The village has inherited a distinctive character of contrasts with open spaces between the dispersed pattern of larger houses set within grounds such as Crab Mill, the Dower House and the Manor, and short terraces and clusters of smaller dwellings.
- 4.6. St Mary's Church is a focal point and prominent in views from higher ground from outside and within the village. At the heart of the village are the historic open spaces of Berry Orchard, the medieval fishponds area and the remnant orchards adjacent to the church.
- 4.7. Areas of countryside reach into the village creating green fingers that contribute to its rural character and provide long distance views. These areas together with the upper and lower

greens, extensive road side grass verges, and swathes of green garden land such as that between Middle and Back Street (for example along Whitehouse Lane) contribute considerably to a unique open weave character (a loose arrangement of built form and open spaces).

View to St Mary's Church and hills across the Upper Green from the Community Shop

- 4.8. Until the 1970's, Ilmington was essentially a farming community supported by essential services, with farm houses and buildings situated within the settlement boundary. Only two working farms remain within the village. Many former farm buildings within the conservation area have been converted to residential use, but with the essential layout of the farmsteads intact (for example the former Burlingham Farm between Front and Middle Street).
- 4.9. Beyond this, post 1950s development has largely left the layout of the core settlement intact, with most development sited at the northern and eastern end of the village, for example, Wilkins Way off Armscote Road. This is a mix of social and market housing that emerged from needs identified in the 2006 Ilmington Parish Plan. It incorporates traditional building styles and materials in a green setting that is a sympathetic addition to the village.
- 4.10. A landscape sensitivity study¹⁶ of Core Strategy local service villages was prepared for Stratford-on-Avon District Council in 2012. This concluded that almost all the areas surrounding the Ilmington conservation area were highly sensitive to housing development.¹⁷
- 4.11. The character of the village is valued by residents as evidenced by community workshop results¹⁸ and the 2017 Ilmington Neighbourhood Plan Survey¹⁹. The survey recorded that 86% of respondents valued the diversity of building style, materials and details. 98% want to preserve the overall quality of the environment, the character and scale of Ilmington village and the pattern and layout of buildings, paths and open spaces. 97% want existing trees and orchards protected.
- 4.12. The most common building material for older buildings is marlstone most of which was quarried from Ilmington Down. When the local quarries were worked out, stone came from other Cotswold and Hornton quarries with ironstone becoming the principal building material.

¹⁶ The Stratford-on-Avon District Council Landscape Sensitivity Appraisal by White Consulting 2012

¹⁷ Historic Environment Assessment of Local Service Villages, Stratford-on-Avon District 2012, AOC Project No: 32127. Section 4.16 HEA 16: Ilmington

¹⁸ Held on 9th & 12th March 2017: see Analysis INP 20170212

¹⁹ Ilmington Neighbourhood Plan Survey Results June 2017 Final Report: Prepared by Performance, Consultation & Insight Unit Stratford-on-Avon District Council March 2017.

- 4.13. Generally coursed rubble stone with dressed quoins, parapets and eaves courses was used for buildings and roughly squared stone for walling, including drystone walls. There are some good examples of fine dressed stonework, such as mullioned windows with drip lintels, chimney stacks and door surrounds.
- 4.14. Multi-red brick was also introduced in the 19th Century with some dwellings completely built in brick such as those along Front Street. Some older stone buildings had brick facades or extensions added. At the same time, welsh blue slate and clay roof tiles were replacing thatch and Cotswold stone slates.
- 4.15. A major change in architectural style occurred in the second half of the 20th Century where new infill houses were allowed to use concrete roof tiles, various colours of brick and windows of untraditional proportion and style. The introduction of the Conservation Area stimulated efforts to promote the use of local stone and characteristic proportions with detailing more in keeping with the village character.
- 4.16. The former Roman Catholic Church of St Philips on Upper Green was sensitively converted and extended to house a community owned shop and café in 2015. This fine 19th Century building has been given a new lease of life in the heart of the community.

*Mullion Windows on Hobdays,

5. VISION

The vision of this Neighbourhood Plan is:

- Ilmington Parish continuing to be a desirable place to live, and thriving with a strong sense of community and a prosperous local economy.
- The village of Ilmington remaining an attractive and tranquil rural settlement set in beautiful Cotswold countryside with its special open-weave mosaic of green spaces and built area preserved.
- New developments focussed around the village of Ilmington. They will reflect and/or complement the village's distinctive and historic character in terms of high quality design by echoing the scale, layout, grain and mix of materials that contribute to that character.
- The village retaining a good mix of housing and community uses.
- The landscape setting of the Neighbourhood Area preserved and protected as well as the views into, out of and within the village.
- Development underpinned by essential improvements in basic infrastructure services including drainage and sewerage.
- The natural environment and community services valued and sustained.

All this together will ensure that the delightful and unique attributes of Ilmington will be handed on to and enjoyed by future generations.

This vision sets a strategic context for the Ilmington Neighbourhood Development Plan.

6. POLICIES FOR ILMINGTON

6.1 Future Housing and Growth

Wilkins Way

STRATEGIC OBJECTIVE:

To meet the economic, social and environmental needs of the Neighbourhood Area through sustainable growth that meets local demand and that conserves and enhances the special character of the Neighbourhood Area and the village.

POLICY HG.1: Housing Allocations

The following sites as shown on Figure 5 are allocated for residential development:

- HG1.1 Site 1 (1.25ha): Land at Mabel's Farm (up to the north side footpath) for approximately 20 dwellings in accordance Policy HG.3, HG.4 and the density parameters set out in Policy DC.1.
- HG1.2 Site 2 (0.2ha): Land off Featherbed Lane for approximately 3 dwellings.
- HG1.3 Site 3 (0.33ha): Land north of Armscote Road for approximately 3 dwellings (subject to alleviating flood risk: in accordance with policies in INF 1 & INF 2 and demonstrating safe pedestrian access).

POLICY HG.2: Strategic Reserve Site

Site 1a (0.5ha): Land at Mabel's Farm is reserved for future housing allocation for approximately 8 dwellings to be released only if there is an identified shortfall in housing delivery in order to maintain a 5-year supply of housing land in Stratford-on-Avon District. Housing on this site will need to comply with the Mabel's site-specific design principles (see Policy HG.3).

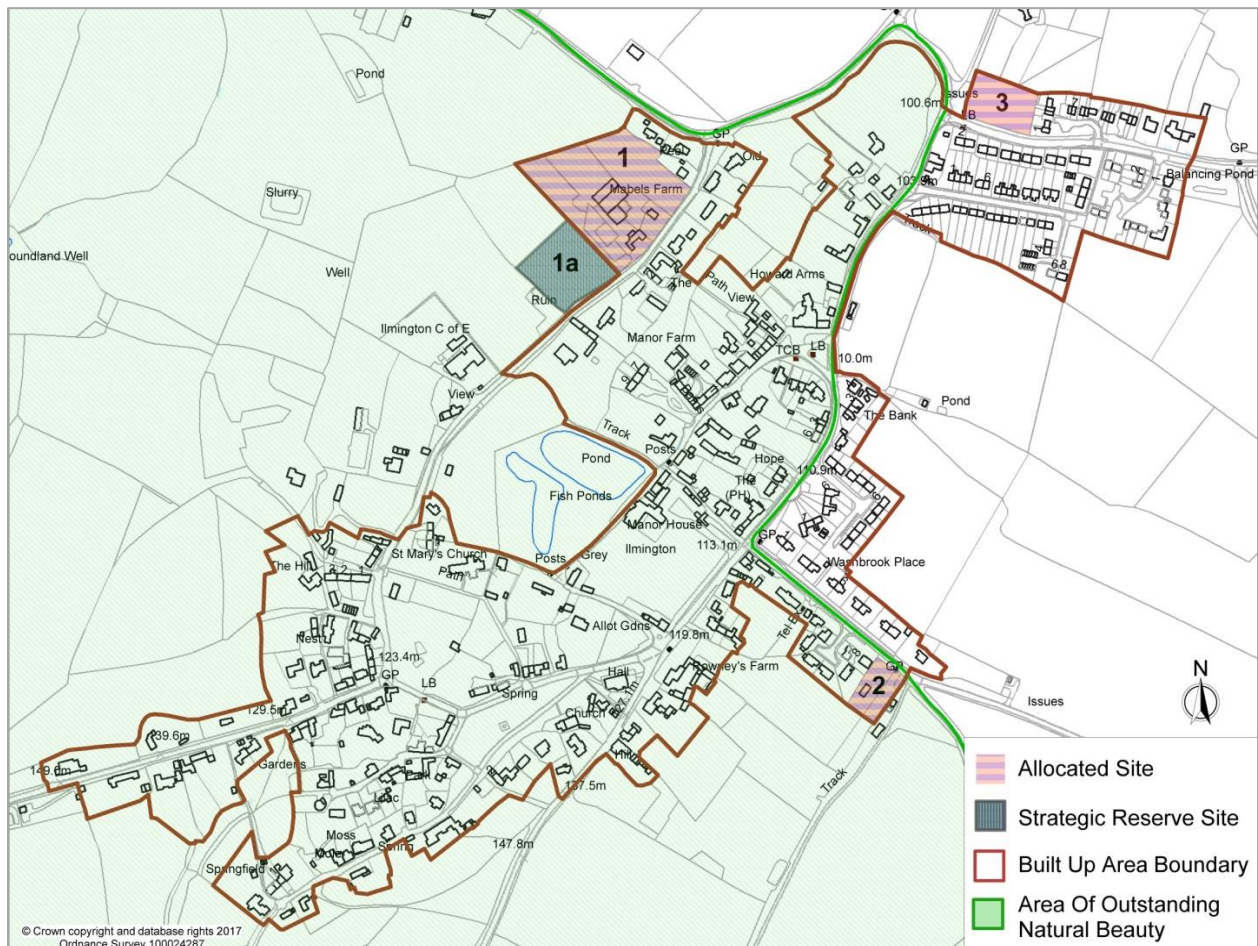

Figure 5: Site Allocation & Strategic Reserve Site Map

Supporting Documents

- Stratford-on-Avon District Council (SDC) Core Strategy: Policy CS.11, 15, 16, Policy C18, Pages 97 & 98
- The Stratford-on-Avon District Council Landscape Sensitivity Appraisal²⁰ (p.B342 – 378)
- National Planning Policy Framework (NPPF): Paragraphs 47, 156, 157 bullet 5, 159, 173, 174

Explanation

- 6.1.1. A call for sites was issued by the Parish Council in January and August 2017 to give all land holders and potential developers an opportunity to bring forward sites in the Neighbourhood Area for assessment through the Neighbourhood Plan process. 25 sites were offered for assessment.
- 6.1.2. No constraints were placed on the call other than that it was for three or more dwellings and that there would be a transparent assessment process. Owners and developers were invited to suggest the number of dwellings envisaged, although this invitation was entirely without prejudice to the outcome of the Plan process.

²⁰ Stratford-on-Avon District Council Landscape Sensitivity Appraisal for Local Service Villages 2012

6.1.3. A detailed site by site analysis is available²¹.

6.1.4. The assessment of the sites put forward were based on the following:

- a. A site-by-site analysis by the Neighbourhood Development Plan Steering Group's Working Group applying locally established criteria assembled from evidence gathering and community consultation. (Figure 6).
- b. A site by site assessment by independent consultants, Avon Planning Services Ltd, commissioned by the Steering Group and conducted in February and November 2017.
- c. The results of four workshops open to all parishioners, two held in March 2017 (80 attendees) and two in September 2017 (40 attendees). Attendees were asked to rate and comment on each site.
- d. The Stratford-on-Avon District Council Landscape Sensitivity Appraisal (Figure 7)
- e. Any sites judged to have potential for no more than 2 dwellings were not included in the assessment, as these should be dealt with through the normal planning process, subject to the application of relevant policies in this document including the Design Principles in Section 7.

Figure 6: Ilmington Neighbourhood Development Plan Steering Group Site Assessment Criteria

The criteria are as follows:

1. A preference for previously developed land.
2. Not prominent in the landscape: for example, not on rising land.
3. Has satisfactory highway access and may provide an opportunity to alleviate traffic issues and hazards.
4. Can provide off-street parking.
5. Is well-connected to existing village amenities, for example the Village Shop, School, Playing Fields, Pubs and Bus Stop.
6. Not at high risk of flooding: cross-referenced with the Environmental Agency Surface Water Flood Risk Map.
7. Not cause harm to the setting of listed buildings, the Area of Outstanding Natural Beauty or the Conservation Area unless that harm is clearly outweighed by other material planning considerations.
8. Available for development and without known impediment to development.
9. Does not cause harm to important views, designated green spaces, valued landscapes, residential amenities or habitats, unless that harm is clearly outweighed by other material planning considerations.

²¹ Ilmington Neighbourhood Plan Working Group: Report on Call for Sites October 2017

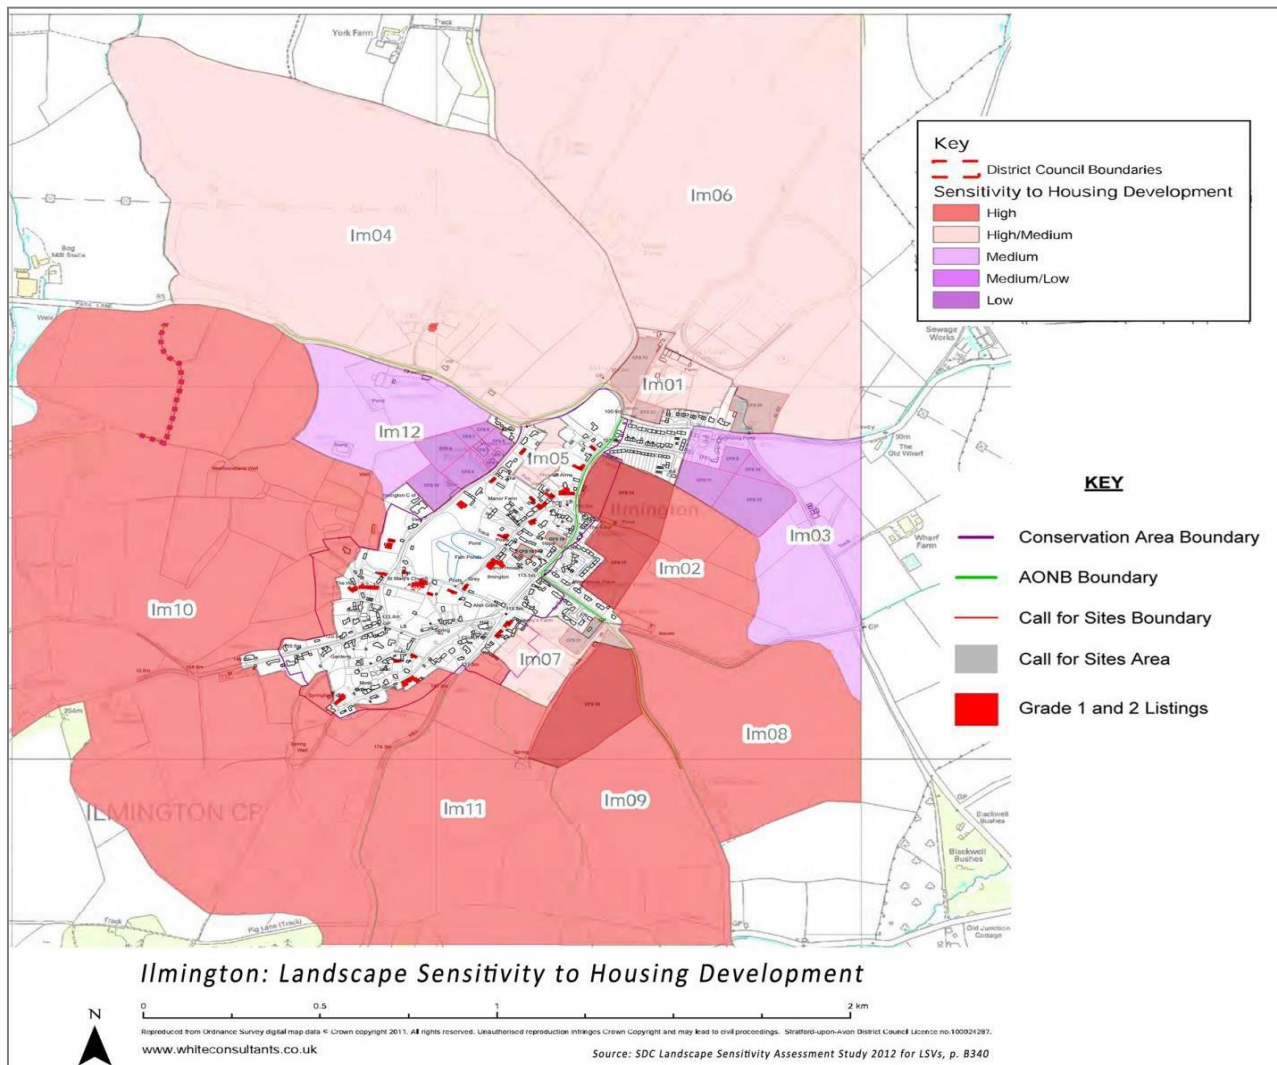

Figure 7: The Stratford-on-Avon District Council Landscape Sensitivity Appraisal
 by White Consulting 2012

POLICY HG.3: Mabel's Farm Development

Development of Mabel's Farm should make a positive contribution to the character of the village. In addition to the Design Principles in Section 7 and the other policies within this Plan, the development should also:

- a. Reflect the traditional built pattern of small groups of houses and avoid an estate style development.
- b. Achieve effective highways access to avoid additional congestion in Back Street
- c. Include green space and reflect the balance between built and green areas in order to respect the 'open weave' character of Ilmington.
- d. Provide footpath access from Back Street to the playing fields and assist in connecting the site to the village's network of footpaths.
- e. To ensure hard surfaces are finished in Cotswold chippings, bonded gravel or other suitable permeable material. Tarmac should be avoided.
- f. Incorporate 35% affordable housing on-site in accordance with SDC Core Strategy Policy CS18

Explanation

6.1.5. The 2017 Ilmington Neighbourhood Plan Parish Survey²³ showed that 98% agreed or strongly agreed that the current density of development, and the character and scale of the village should be preserved, particularly in the Conservation Area (Q 15). 97% agreed or strongly agreed that the pattern and layout of buildings, paths and open spaces in Ilmington should be conserved (Q15). 95% felt that new development should be in keeping with the character of the Parish and village. 94% felt that it should also reflect the village's open character (Q23). Figure 8 shows responses to the relevant survey questions.

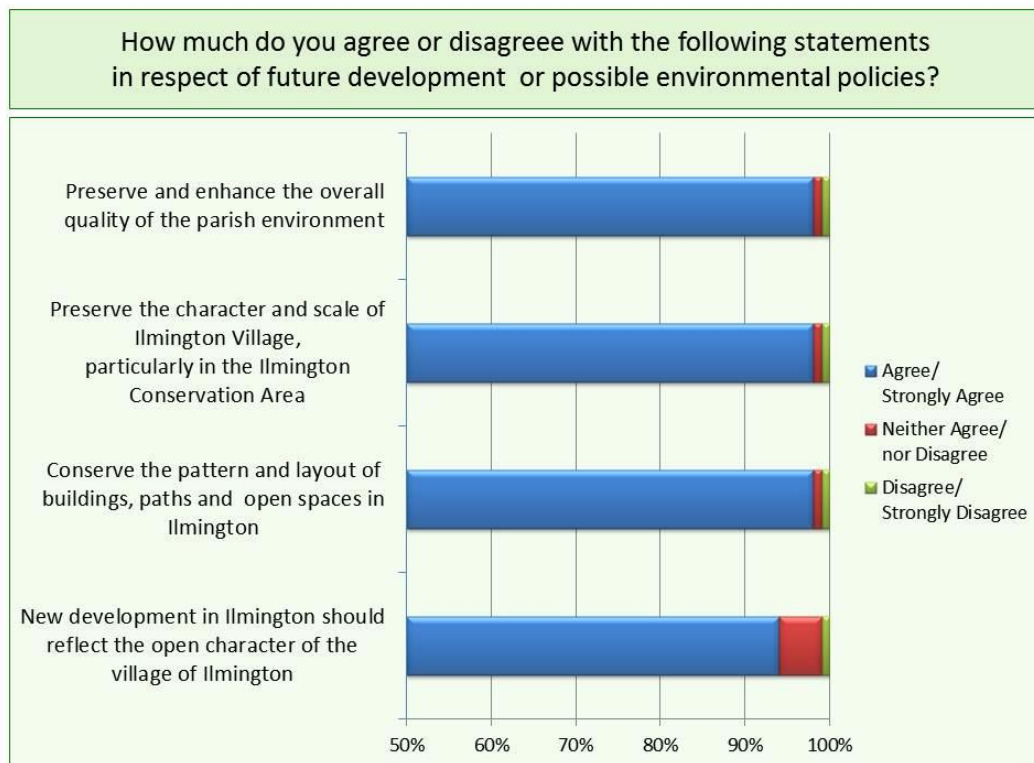

Figure 8: Ilmington Neighbourhood Plan Survey 2017 responses (Q15 and 23)

Mabel's Farm

6.1.6. Mabel's Farm

6.1.6.1. There are some specific factors that led to this proposal.

6.1.6.2. This is the largest proposed site allocation in the Plan. A significant proportion of attendees at the March 2017 workshops preferred development on land at Mabel's Farm over the alternatives²⁴ brought forward through the call for sites

²⁴ March 2017 consultation workshops: See Analysis INP 20170212

and the site assessment process also consistently supported development at Mabel's Farm in comparison to most other sites.

- 6.1.6.3. The 2017 Ilmington Neighbourhood Development Plan Survey (Q25) asked residents for their preferences in terms of the form of future new development and identified that residents preferred small clusters rather than larger single developments. The research²⁵ suggests that a layout and design can be achieved that would satisfy this preference.
- 6.1.6.4. A number of considerations emerged that favour the site as one of those proposed for allocation, including that:
 - a. The site is already partly developed (as a farmstead in agricultural use)
 - b. A high-quality development has the potential to enhance the appearance of the Cotswolds Area of Outstanding Natural Beauty in this location and the setting of the adjacent conservation area.
 - c. Stratford-on-Avon District Council Conservation Area Review 1995 identified parts of Mabel's Farm as an "eyesore" which detracts from the character and appearance of the Cotswolds Area of Outstanding Natural Beauty (AONB). This was reinforced in the results of the workshops and the Landscape Sensitivity Survey (2012)²⁶ that indicated that this was an area within the AONB that could be improved.
 - d. The site is located close to village facilities and amenities, particularly the primary school and the playing fields which will mean any development can be well connected and integrated with the village and should reduce trips by car to access those facilities.
 - e. In line with Section B, CS.18, A development of approximately 20 houses on Mabel's Farm should provide 7 affordable homes on site. This would not be the case for a scheme of less than 11 houses.
 - f. Based on the number of respondents to the survey²⁷ who indicated a desire for affordable housing (Section 3 and Q41 comments), it is the Steering Group's assessment that the 7 houses that would be provided on the Mabel's Farm Development would satisfy that need.

²⁵ Indicative masterplan submitted by Warwickshire County Council (2017)

²⁶ Stratford-on-Avon District Council Landscape Sensitivity Appraisal for Local Service Villages 2012, p. B376

²⁷ Included in the 2017 Ilmington Neighbourhood Development Plan Survey was a Housing Needs Assessment Survey

POLICY HG.4: Relocation of Mabel's Farm

The relocation of Mabel's Farm including a new farmhouse and modern farm buildings will be supported in principle subject to compliance with other policies in this Plan.

Explanation

6.1.7. In accordance with Warwickshire County Council's current policy of sustaining their tenanted small holdings, Mabel's Farm should be located within the immediate local area.

POLICY HG.5: Sites 2 and 3

Development should be in the form of a small courtyard or an extension of the road frontage in keeping with the village's character and associated street scene.

POLICY HG.6: Strategic Reserve Site

Site 1a (0.5ha): Land at Mabel's Farm is reserved for future housing allocation for approximately 8 dwellings to be released only if there is an identified shortfall in housing delivery in order to maintain a 5-year supply of housing land in Stratford-on-Avon District. Housing on this site will need to comply with the Mabel's site-specific design principles (see Policy HG.3).

COMMUNITY INFRASTRUCTURE LEVY (CIL)

A development at Mabel's Farm of this size should attract a significant amount of Community Infrastructure Levy a proportion of which will go directly to the Neighbourhood Area. CIL is a planning charge on developments used to help deliver infrastructure support in the Neighbourhood Area.

Depending on the amount of funds made available from the CIL for the benefit of the Neighbourhood Area, this would be administered and/or allocated by the Parish Council in consultation with the community. Out of the parish-wide survey 2017, some projects were suggested. These include:

- Parking bays in front of the Community Shop along Upper Green
- Pavements along from Upper Green to Campden Hill and from Front Street to Mickleton Road
- Re-surfacing of Playing Fields car park
- Selective, additional noticeboards to highlight and signpost amenities and activities to accommodate increasing parishioner numbers in any significant new developments

6.2 Development Criteria

STRATEGIC OBJECTIVE:

To ensure that future development in the Neighbourhood Area reflects and enhances the distinctive qualities that make the Neighbourhood Area and village of Ilmington a special place to live, work or visit.

POLICY DC.1: Development within the Neighbourhood Area

Development within the Neighbourhood Area will be supported in principle if it complies with the other policies in this Plan and:

- DC1.1 Conserves the rural character of the Neighbourhood Area and in particular the village.
- DC1.2 Complies with the Design Principles set out in Section 7.
- DC1.3 Protects the landscape setting of the village by protecting the surrounding countryside from unsympathetic development.
- DC1.4 Reflects the existing settlement pattern with housing density of up to 16 dwellings per hectare. However, individual sites can include a mix of localised densities to reflect the character of the village.
- DC1.5 Respects and contribute to the character of the village and preserves or enhances:
 - Listed buildings and their settings
 - The Ilmington Conservation Area and its setting
 - Valued Landscapes
 - The Cotswolds Area of Outstanding Natural Beauty
 - Remnant orchards
 - Local Green Spaces, hedges, and significant trees
 - The balance between open green spaces and the built area
 - The open weave character as described in Section 7 and defined by the mix of open green spaces, footpaths and built areas.

Supporting Documents

- Ilmington Parish Plan 2006: Design Statement (p.21 -25)
- Design Guide: Stratford Design Guide – Actual and visual density 1.5.1 (p.4)
- Built-Up Area Boundary Stratford-on-Avon District Council: Informal planning guidance
- Ilmington Neighbourhood Plan Survey 2017, Section 2
- National Planning Policy Framework: Paragraphs 47 (bullet 5), 50, 55 (bullet 4)

Explanation

6.2.1. Density

6.2.1.1. The historic open weave pattern of housing and other past development in Ilmington as described in Section 4.7 is a defining and valued feature that combines open green space, footpaths, and orchards with houses and other buildings. Housing densities are characteristically relatively modest, albeit that at a micro level they are variable and range from dispersed patterns of houses to small, denser clusters (Figure 9). Section 7 (Design Principles) paragraph 7.2.1 provides further details regarding layout.

6.2.1.2. Of the more modern developments found in Ilmington, Wilkins Way most closely resembles the historic pattern of the village in terms of density, open layout, design, housing mix and materials. The policy on density (DC1.4) reflects this analysis and the desirability of reflecting the historic pattern for housing, rather than some other more recent developments from the mid-20th Century (e.g. Cross Leys or Bennett Place).

6.2.1.3. The overall density of new developments should reflect the existing settlement pattern and should be in the range of 10 to 16 dwellings per hectare. However, the site can include a mix of densities to reflect the character of the village.

Ilmington Village Density Analysis

Name	Area (Ha)	Number of Houses	Density per Ha
Conservation Area	42.6	191	4.5
Washbrook Place	2.7	37	13.7
Bennett Place	2.5	49	19.6
Wilkins Way	0.9	14	15.6
Cross Leys	0.8	17	21.25
Built-Up Area Boundary	49	291	6.2

Figure 9

POLICY DC.2: Built-Up Area Boundary

Proposals for new dwellings within the built-up area boundary, as defined in Figure 10 will be supported in principle, subject to being in accordance with other policies in this Plan. All areas outside the built-up area boundary are classed as countryside. New dwellings within the countryside should be strictly controlled and limited to Rural Exception Sites²⁸, replacement dwellings and dwellings for rural workers, the conversion of existing buildings and dwellings of truly outstanding or innovative design.

Supporting Documents

- SDC Core Strategy: Policy AS10 criterion (i) of Development in the Countryside
- Built-up-Area Boundary Assessment INP010517
- Stratford-on-Avon District Council Strategic Environmental Assessment
- Built-up-Area Boundary Stratford-on-Avon District Council: Informal planning guidance

Explanation

6.2.2. Ilmington village is the single settlement within a rural Parish. The purpose of the Built-up Area Boundary is to distinguish between the extent of the built environment of the village where certain forms of development are appropriate and the surrounding countryside, where protection and enhancement are of utmost importance. Defining the Ilmington Built-up-Area Boundary applies Government advice and the SDC Core Strategy to:

- Define areas within which planning permission will normally be granted for new development, subject to other planning policies
- To support the best use of existing and future services within the village
- Preserve the setting of the village by protecting the surrounding countryside from inappropriate development

²⁸ A Rural Exception Site is defined as: Small sites, in or adjoining the village, “used for affordable housing in perpetuity where sites would not normally be used for housing. Rural exception sites seek to address the needs of the local community by accommodating households who are either current residents or have an existing family or employment connection. Small numbers of market homes may be allowed at the local authority’s discretion, for example where essential to enable the delivery of affordable units without grant funding.” (www.planningportal.co.uk/directory_record/489/rural_exception_site)

POLICY DC.3: Infill within the Built-Up Area Boundary

Limited infilling within the Built-up-Area Boundary (see Policy DC.2) will only be supported in principle, provided that the development:

- DC3.1 Contributes to the character of the village.
- DC3.2 Is modest and in proportion to the size of the site and designed to respect the context and amenity of neighbouring properties as well as the wider village.
- DC3.3 Conforms with the Design Principles set out in Section 7 of this Plan.
- DC3.4 Provides a suitable and safe means of access and egress to the highway and sufficient off-road parking.

Supporting Documents

- Ilmington Neighbourhood Development Plan Survey 2017

Explanation

- 6.2.3. Respondents to the Neighbourhood Plan Survey strongly agreed that future development should reflect the open character of village and preserve and enhance the Ilmington conservation area²⁹. Unless infilling within the village is carefully managed, there is a risk that its valued open character will be eroded.

POLICY DC.4: Pedestrian Access to Amenities

Where possible, new housing should be designed to ensure that it connects safely to the village's amenities and its existing pavement network within the village of Ilmington.

White House Lane

Peggy's Lane

- 6.2.4. Ilmington's is criss-crossed by a network of footpaths that weave through the village and provides safe pedestrian access to amenities, open spaces and the countryside. (see Figure 11)
- 6.2.5. This encourages walking and helps to reduce the use of motor vehicles for short journeys within the village as a contribution to sustainability.

²⁹ Ilmington Neighbourhood Development Plan Survey 2017 Q23

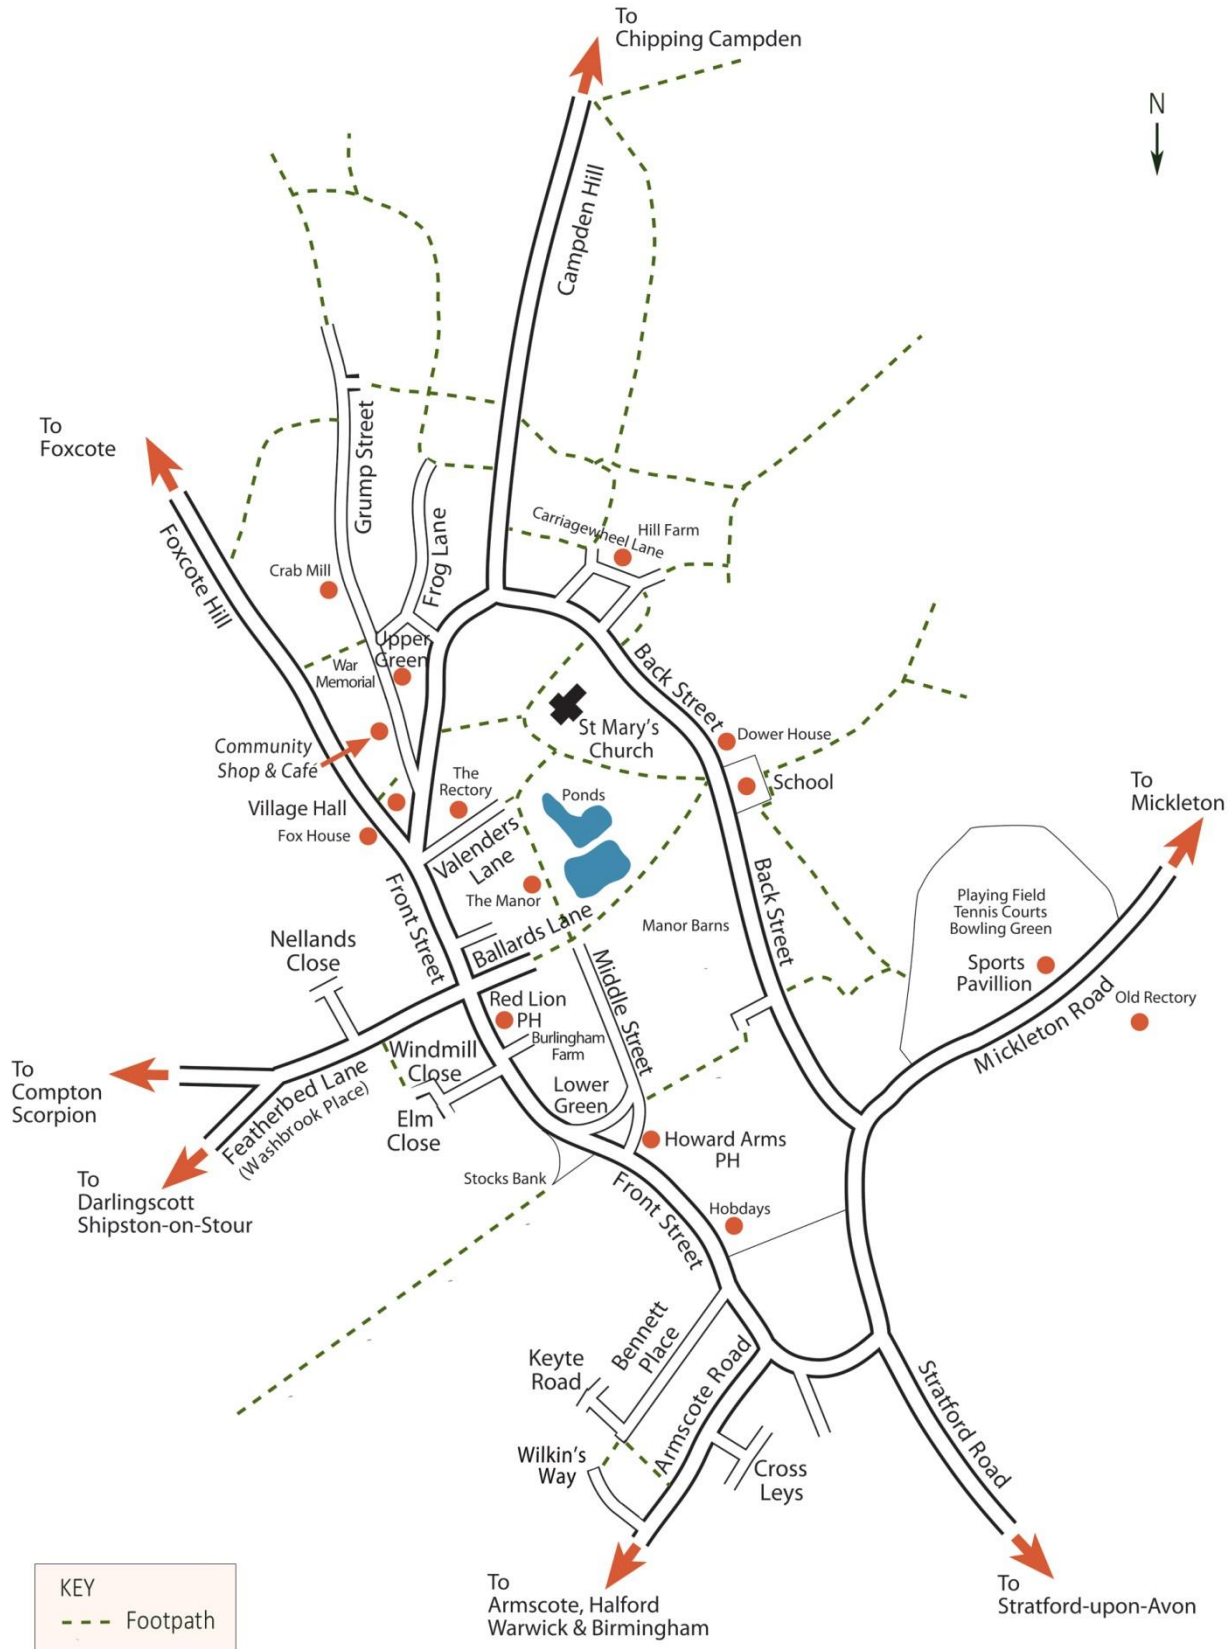

Figure 11: Ilmington Village Map showing network of footpaths

POLICY DC.5: Valued Landscapes, Vistas and Skylines

Development proposals must demonstrate how they are appropriate to, and integrate with, the character of the landscape setting whilst conserving, and where appropriate, enhancing the character of the landscape.

Development proposals should ensure that all valued landscapes, as shown in Figure 12, and important vistas and skylines are maintained and safeguarded, particularly where they relate to heritage assets, rising land, village approaches and settlement boundaries.

Supporting Documents

- Neighbourhood Development Plan Survey (2017): (Q15).
- Ilmington Neighbourhood Development Plan Report: Natural Environment Appraisal, July 2017
- Neighbourhood Development Plan Consultation Workshops 2016
- Stratford-on-Avon District Council Conservation Area Review 1995
- Ilmington Parish Plan Design Statement 2006: Ilmington Parish Plan, p.22
- National Planning Policy Framework (NPPF): Section 11, paragraph 115
- Cotswold Conservation Board 'Tranquillity and Dark Sky Position Statement' 2010

Explanation

- 6.2.6. The village is set at the base of an amphitheatre of hills with the Cotswold Escarpment highly visible. This setting, and the village balance of open green spaces and built areas offer many and varied views of this beautiful landscape setting. These valued landscapes, vistas and skylines are one of the Neighbourhood Area's defining special characteristics.

- 6.2.7. The majority of Ilmington village's Valued Landscapes lie within the Cotswolds Area of Outstanding Natural Beauty and Conservation Area (see Figure 12).
- 6.2.8. Views of the village's valued landscapes can be found looking:
- **From rising land into, across, and beyond the village:** The amphitheatre of hills surrounding the village stretches from the east to the south and west. This undeveloped, open rising land enables far-reaching panoramic views into the village and beyond.
 - **Toward rising land, orchards, green spaces and open countryside from within the village:** Views to valued landscapes from within, out of and through the village exist as a consequence of its open character. Particularly valued are views toward rising land and special heritage assets such as St Mary's Church. The village's open layout provides many glimpses of the surrounding hills, and countryside, and special heritage assets can often be seen between houses and along footpaths.
- 6.2.9. Ilmington's numerous open spaces, hills and natural landscapes have a positive impact on the quality of life, and sense of personal well-being of residents and the many visitors alike³⁰.
- 6.2.10. 80% of respondents to the Ilmington Neighbourhood Development Plan Survey 2017 valued the village's open green spaces and open weave layout (Q15).
- 6.2.11. Figure 11 (Map of Valued Landscapes) and the photographic references in Appendix 2 show key Valued Landscapes, how they can be seen from well used public footpaths and public highways and how they provide settings for important conservation area and Heritage Assets. They are:
1. **Rising land to the west of the village:** this undeveloped rising land stretches from Hill Field / Nut Bank and Payne's Piece to the built area of Campden Hill and forms part of the amphitheatre of hills that is the natural setting of the village. The many footpaths that criss-cross it allow visitors and walkers (looking east) to enjoy panoramic views of the whole village and St Mary's Church.
 2. **Rising land to the south of the village:** looking North and Northwest from Pig Lane, panoramic views of the village are across the original quarry from which Ilmington housing stone was obtained and beyond to Stratford upon Avon and across the Vale of Evesham.
 3. **Rising land off Foxcote Hill (looking east / southeast):** the top of Foxcote Hill affords panoramic, far-reaching views toward Darlingscote and Blackwell, beyond to historically important Edgehill (over 10 miles away) and to the Feldon and Coventry (over 25 miles away).
 4. **Rising land off Foxcote Hill (looking north / northwest/ west):** like all the undeveloped rising land surrounding the village to the south, the views from Foxcote Hill afford panoramic views that are part of Ilmington's distinctive character, including views of the village, St Mary's Church, Stratford-upon-Avon and the Malvern Hills.

³⁰ Cotswold Conservation Board 'Tranquillity and Dark Sky Position Statement' 2010, pp. 2 & 3

5. **Upper Green:** there is intervisibility between the southeastern side of Upper Green toward Hill Field, Payne's Piece and Campden Hill which contributes to the open nature of the village. Panoramic views from the Community shop extend across most of the village and take in special heritage features such as St Mary's Church and the Front Street allotments.
6. **Peggy's Lane with views to St Mary's Church:** on north side of the lane is Clifford Orchard and to south are low walled open gardens and a brook. These create a natural frame to one of Ilmington's most prized heritage assets, the Grade I listed, St Mary's Church.
7. **Front Street toward Rising Land:** looking south to the escarpment, the village on either side of Front Street provides a frame for the highly valued amphitheatre of hills beyond bringing a sense of the surrounding natural landscape into the village.
8. **Berry Orchard:** the site is highly regarded for its natural beauty, medieval fishponds, wildlife, tranquillity and important open views. It is extensively used by parishioners, dog walkers and ramblers. The site forms part of Ilmington's open weave mosaic pattern and setting of Grade II listed buildings (Ilmington Manor, Grey Cottage, The Bevingtons and Wharf Farm) in Middle Street and St Mary's Church.
9. **Middle Street toward Rising Land:** looking south to the escarpment, the medieval positioned houses on either side of Middle Street provides a sense of intimacy and a frame for the highly valued amphitheatre of hills beyond bringing a sense of the surrounding natural landscape into the village.
10. **From the Lower Green to Kyte Hill:** this open, undeveloped and imposing rising land lies to the west of Front Street and provides a strong contribution to local character, setting and distinctiveness due to its natural beauty. Additionally, there are unrestricted views from the public footpath (Warwickshire Centenary Way) alongside Kyte Hill as well as commanding views over Ilmington from which forms part of the setting of the village and Grade II listed buildings in Front Street (Hobdays, Hobdays Barn and The Stable Barn).

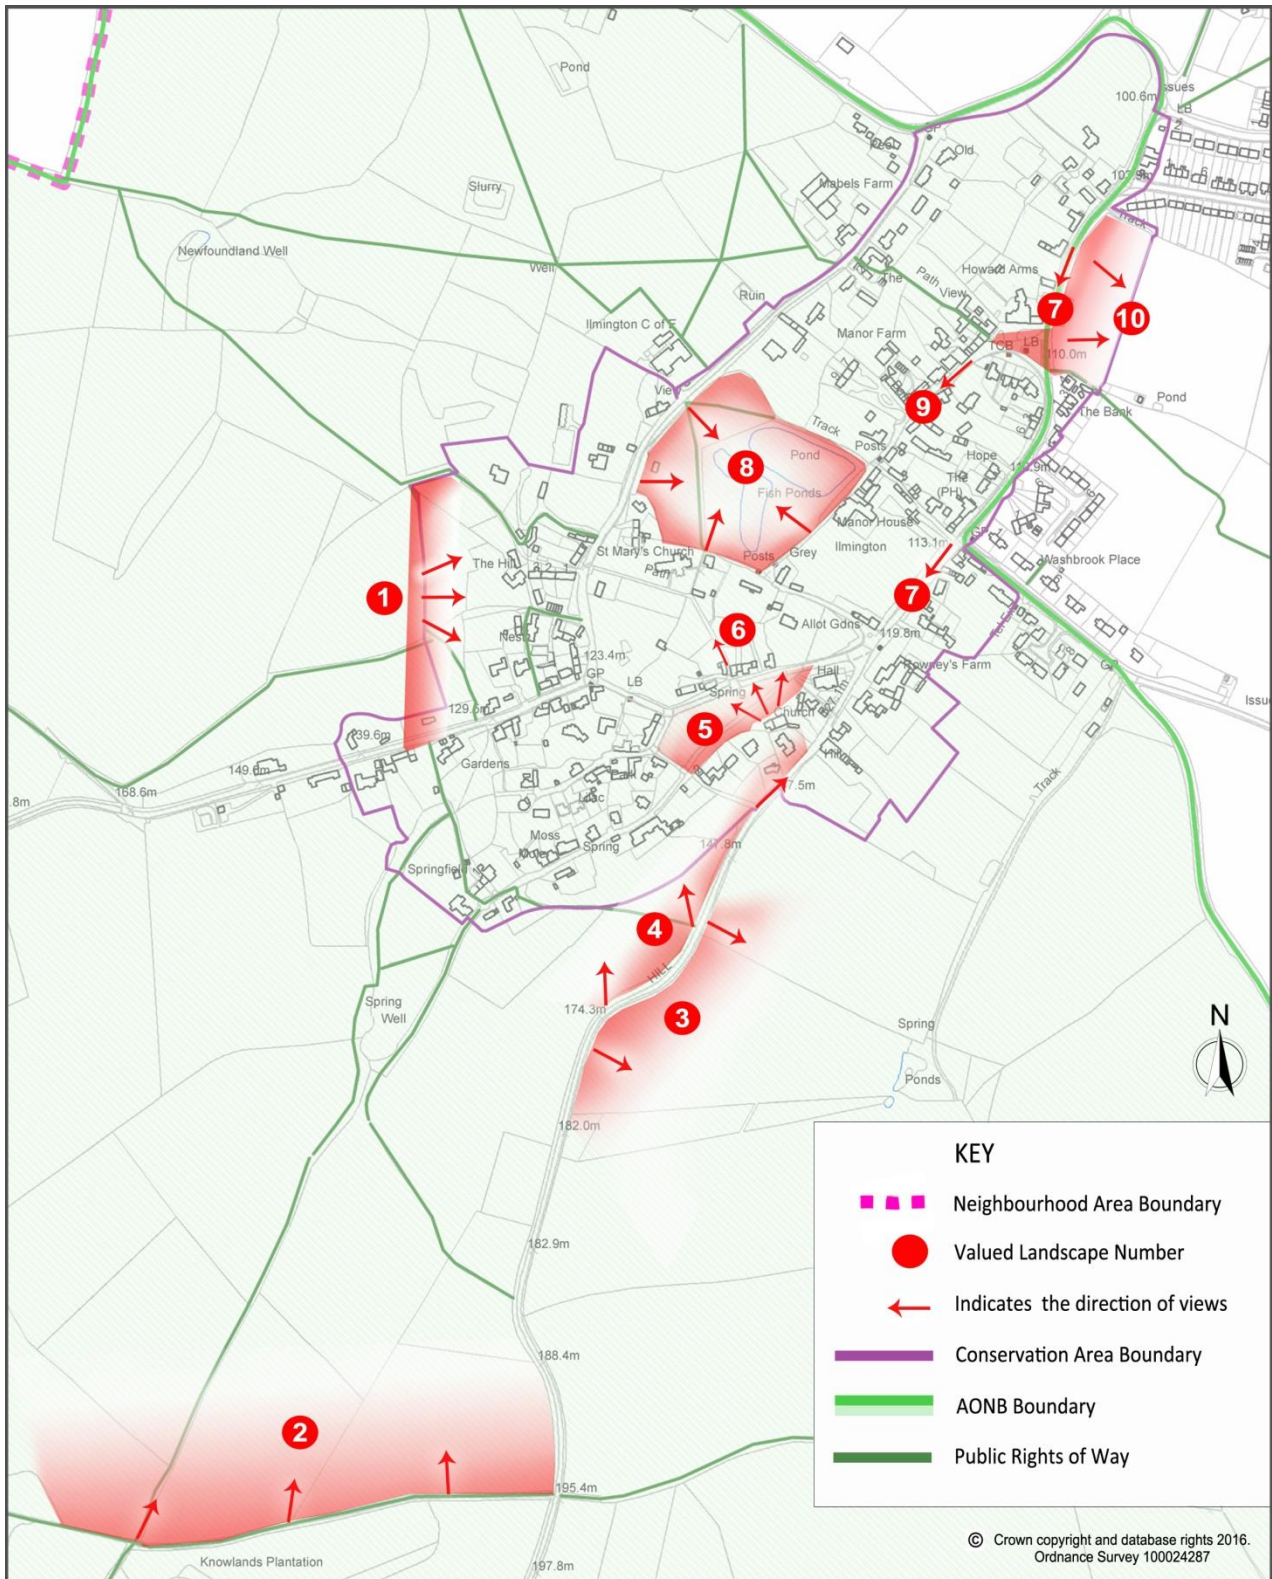

Figure 12: Valued Landscapes of Ilmington Village

POLICY DC.6: Environmental Sustainability

All development should be designed to be environmentally sustainable. This includes:

- Plans that include the recycling of grey water and captured rainwater will be supported.
- Plans for renewable technology will be supported provided that proposals, including solar panels and heat pumps, are situated so as to minimise any harm to the conservation area, the AONB and the appearance of buildings and the street scene.
- Any new buildings should contribute to the achievement of sustainable development in reducing the environmental impact through resource efficient design, the use of suitable, 'eco-friendly' forms of construction and where appropriate, locally sourced building materials.
- New or renovated buildings should also be energy efficient to accord with the objective of the National Planning Policy Framework to ensure new building is sustainable and to reduce or mitigate the effects of climate change.

Supporting Documents

- SDC Core Strategy: Strategic Objective 5. P.18, CS.2, CS.3, CS.9
- National Planning Policy Framework: Paragraphs 17, 93, 97
- Ilmington Neighbourhood Plan Survey 2107: Q23
- Cotswold AONB Management Plan 2013 – 2018: NRP2
- Cotswold Conservation Board Position Statement: Renewable Energy 2014

Explanation

- 6.2.12. 75% of respondents to the Ilmington Survey agreed that new housing should use renewable energy and green approaches to resource use, e.g. water.
- 6.2.13. In encouraging sustainable technologies and approaches, it is important that siting and operation minimise noise or visual impact to protect neighbours' amenity.

POLICY DC.7: Local Parking Standards and Traffic Management

All new dwellings shall ensure by design that:

- Provision for the parking of motor vehicles at a ratio of one space per bedroom, including garages and carports, is available within the curtilage of the development.
- The design standards for the provision of car parking spaces, garages and car ports should comply with the maximum standards of the Stratford-on-Avon District Council's development requirements.
- Appropriate cycle storage facilities should be provided within the curtilage of each dwelling.
- Parking areas should be discreetly sited and carefully designed to avoid detracting from the village street scene and should not be visually dominant or disruptive to the residential amenity.
- Visitor parking should be provided within the curtilage of the development at an additional 10% of total parking provision in order to avoid on-street parking within the village.

Supporting Documents

- SDC Core Strategy Policy: CS.26
- SDC Development Requirements Draft SPD
- Ilmington Neighbourhood Plan Survey: Q14 and 31
- Manual for Streets 2: Wider Application of the Principles: The Chartered Institution of Highways and Transportation, September 2010
- National Planning Policy Framework: Paragraph 39

Explanation

6.2.14. The proposed policy seeks to ensure that new development does not increase the existing problem of on street parking.

6.2.15. Much of the housing stock within the village of Ilmington was constructed in the era before motor vehicles and space for their parking of their cars became necessary. Vehicles belonging to residents are frequently parked at the roadside outside their properties (Q14). In the Ilmington Neighbourhood Plan Survey, 73% said that parking on pavements and verges was a problem with 91% saying any new development should have more provision for car parking. (Q 31)

Parking on Bennett Place

6.2.16. The Neighbourhood Plan Survey demonstrated that many households possess two or three vehicles (see Figure 13 from 2017 Ilmington Neighbourhood Plan Survey).

Figure 13: Number of vehicles per household

Traffic congestion and parking on Back Street during school run

Verge damage on Back Street

6.3 Heritage and Archaeological Assets

STRATEGIC OBJECTIVE:

To protect and conserve the heritage assets that shaped the present character of the Neighbourhood Area and village so that they can be enjoyed for future generations.

Policy HA.1: Heritage and Archaeological Assets

Where required by the planning authority, development proposals should demonstrate how they will conserve or enhance the Neighbourhood Area's historic environment including archaeological assets.

The impact of any development on any heritage asset will be judged against the degree of harm and the significance of the heritage asset affected and weighed against any public benefits.

Supporting Documentation

- SDC Core Strategy Policy: CS.8
- Warwickshire Historic Environmental Record (WHER) at timetrail.warwickshire.gov.uk
- Historic Environment Assessment of Local Service Villages, SDC 2012: Section 4.16.
- South East Warwickshire and Cotswolds Higher Level Stewardship Target Areas: A Report for the National Mapping Programme 2013, Priest and Dickson

Explanation

6.3.1. Ilmington has a wealth of heritage assets, which are outlined in Section 2.

6.3.2. The majority of Ilmington Village lies within a conservation area (See Figure 14) and is also situated in an area of High Archaeological Sensitivity³¹ (see Figure 15). Within the Neighbourhood Area there are 61 listed buildings with 37 being in the village itself³². The Warwickshire Historic Environment Record lists 106 records of heritage assets and finds³³ that includes examples of Ridge and Furrow within the Neighbourhood Area. This historic agricultural landscape is becoming increasingly rare with 73% of all visible ridge and furrow being levelled between the 1940s and 2007.³⁴

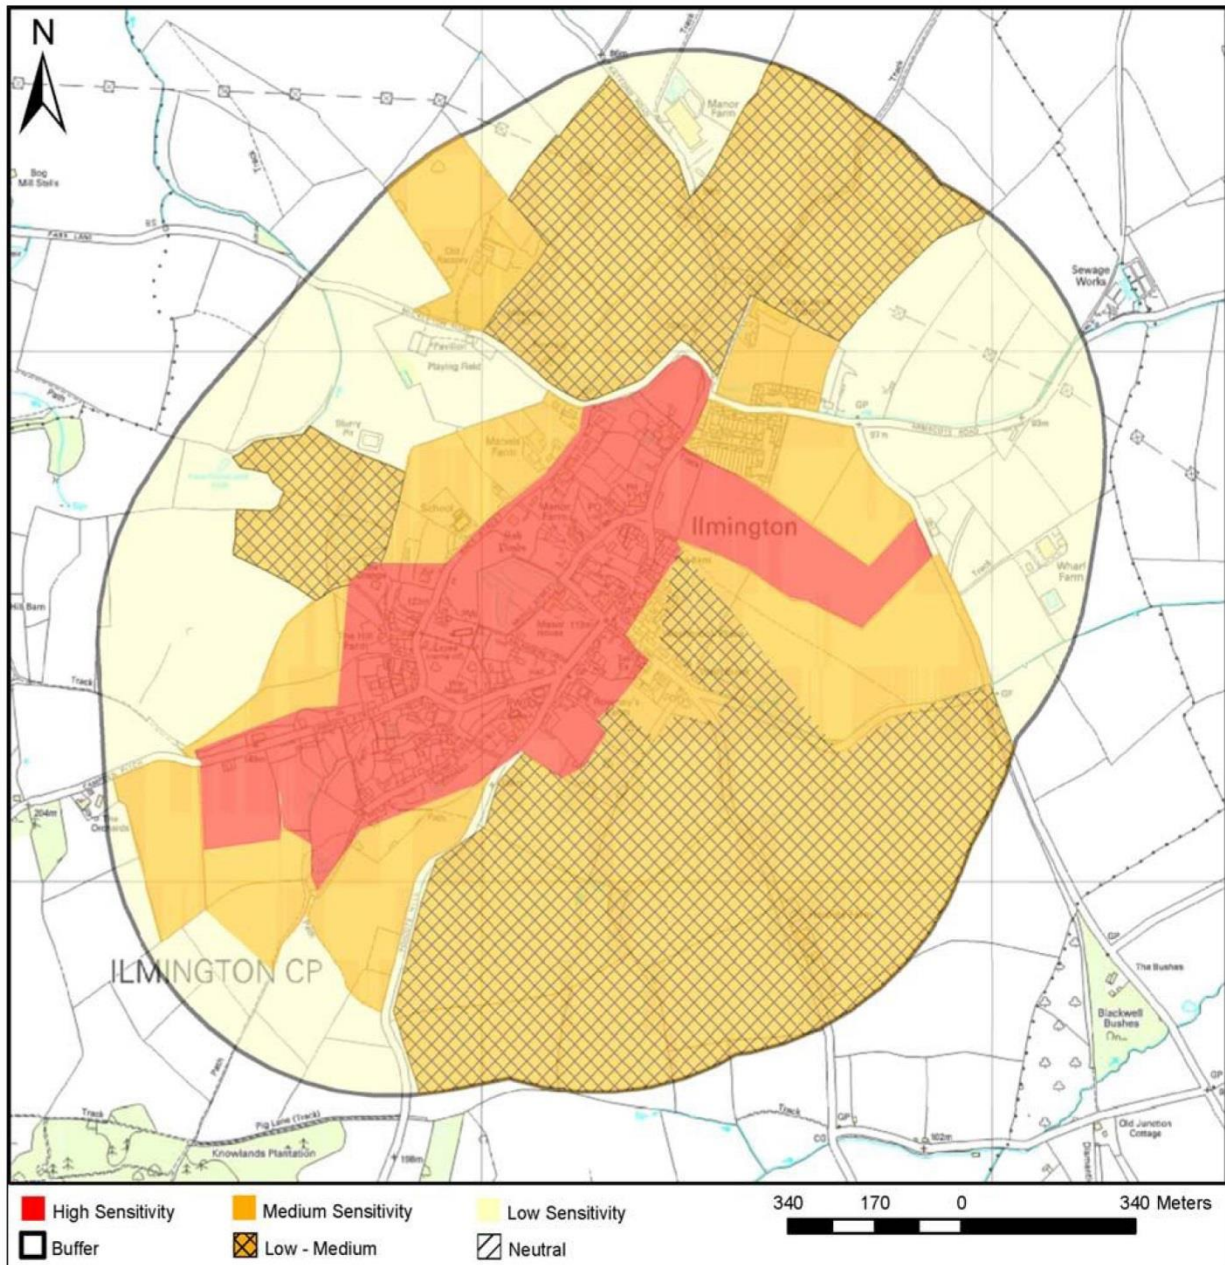

The Bevingtons

³¹ Historic Environment Assessment of Local Service Villages, Stratford-on-Avon District 2012, Section 4.16 .9

³² See Figure 2 of this document (p. 10)

³⁴ SE Warwickshire and Cotswolds HLS Target Areas, A Report for NMP 2013, Priest and Dickson, p57

6.4 Local Green Spaces

POLICY LGS.1: Local Green Spaces

This Plan designates the following areas of Local Green Space as defined on Figure 16 at the following locations in the village of Ilmington:

- a. LGS 1: Ilmington Playing Fields and playground, Mickleton Road
- b. LGS 2: Kyte Hill / Windmill Hill (Western Portion adjoining Front Street Only)
- c. LGS 3: Middle Meadow Garden, Front Street/Middle Street
- d. LGS 4: Berry Orchard / Fish Ponds (Between Back Street and Middle Street)
- e. LGS 5: Field on Back St (between Dower House and the two cottages: Mary's Cottage and The Glen)
- f. LGS 6: Clifford's Orchard (bordering Back Street, Front Street and Peggy's Lane)
- g. LGS 7: Allotments, Valenders Lane
- h. LGS 8: Land south east of Grump Street and Crab Mill Cottage
- i. LGS 9: Land at Wilkins Way
- j. LGS 10: Clifford's Allotments, Campden Hill

Development that would harm the openness or special character of a Local Green Space or its significance and value to the local community will not be supported unless there are very special circumstances which outweigh the harm to the Local Green Space.

Supporting Documents

- National Planning Policy Framework: Paragraphs 76 – 78, 157 (bullet 7)
- National Planning Practice Guidance: Open space, sports and recreation, public rights of way and local green space.
- Cotswolds District Council: Green Space Tool Kit
- Ilmington Neighbourhood Plan Workshop Green Space Analysis: IMP 030417
- Ilmington Neighbourhood Plan Survey: Comments (Q17)
- Ilmington Neighbourhood Plan Green Space Survey Analysis: IMP 040317
- Local Green Space Selection for Independent Assessment: IMP 150317
- Independent Assessment by Avon Planning Services
- SDC Conservation Area Review: Ilmington 1995
- Ilmington Parish Plan 2006

Explanation

- 6.4.1. These areas have been demonstrated to be of significance to the local community through the independent assessments, Ilmington Neighbourhood Plan workshops and survey analyses. The importance of Local Green Spaces is reflected by the fact that 185 (85%) respondents to the Ilmington Neighbourhood Plan Survey left 732 comments on their preference for protected green spaces within Ilmington village.

- 6.4.2. These designated spaces include existing sports play and recreational spaces, remnant orchards, open spaces and rising land that form defining features that characterise the village's mix of houses, footpaths and open mosaic. Most are either traversed by public rights of way or adjoin them, and are prominent from them.
- 6.4.3. The majority of the sites designated are in the Area of Outstanding Natural Beauty and conservation area. Additionally, LGS 4, LGS 5, LGS 6 and LGS 7 are noted as important views in the 1996 Conservation Area Review report as well as research for the 1996 Ilmington Parish Plan.

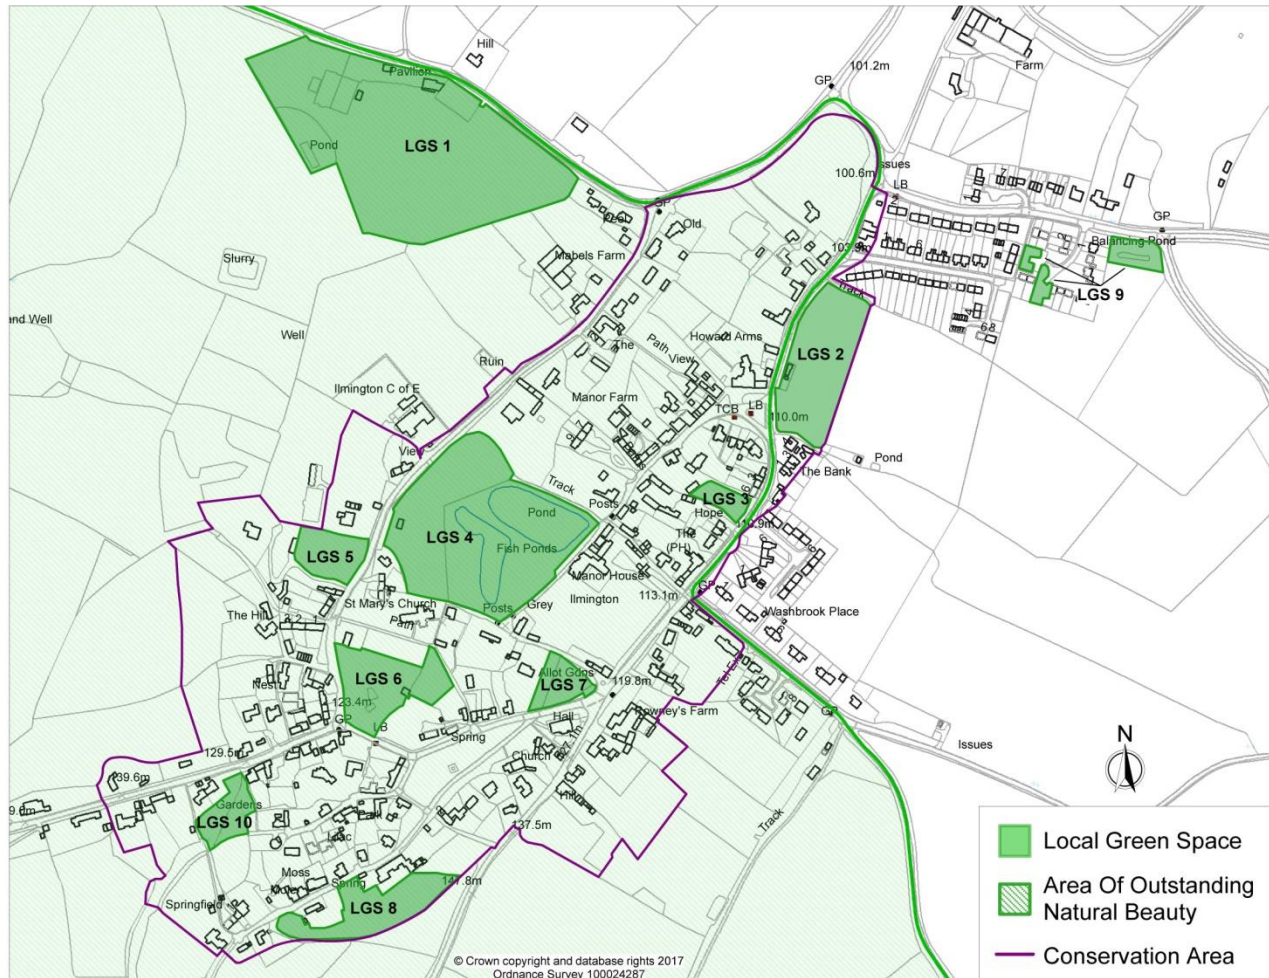

Figure 16: Location of Green Spaces Designated as Local Green Space
 (See Appendix 3 for descriptions and photographic examples)

PROJECT:

Where possible, Community Infrastructure Levy funds could be used to improve access to these designations to ensure a suitable quantity and quality of recreational and amenity space is available for the Neighbourhood Area.

6.5 Infrastructure

STRATEGIC OBJECTIVES:

- To maintain, and where practicable, to improve the ability of the existing infrastructure to meet community needs and mitigate the adverse effects of inadequate existing infrastructure.
- To provide adequate capacity to support future planned development.

POLICY INF.1: Flooding

Pluvial (surface water from rainfall) and Fluvial (from rivers) Flood Risk

- a. Proposals will only be supported if they satisfactorily address the risk of fluvial and pluvial flooding.
- b. Appropriate Sustainable Drainage Systems (SuDS) should be incorporated into all new developments and designed to control run-off generated on-site to the greenfield run-off rate for all return periods up to and including the 1 in 100 years plus climate change critical storm event criteria.
- c. Infiltration and above ground SuDS attenuation, such as swales, ponds and other water-based ecological systems, should be used wherever feasible and is preferred to underground storage of water.
- d. Where mitigation measures involve cut off ditches, balancing ponds and or similar, proposals should demonstrate the means by which these shall be maintained to ensure their satisfactory performance in perpetuity.

POLICY INF.2: Foul Water Drainage Mitigation

All new development must demonstrate adequate means of foul drainage and evidence submitted to demonstrate sufficient capacity exists within the system to drain and process sewage during and subsequent to episodes of heavy rainfall.

- a. Proposals to erect new dwellings should include measures to:
 - 1) Store discharges of foul water from the development and prevent its discharge into the public foul water sewer unless capacity is available to accept it without contributing to existing overload “down-stream”.
 - 2) Prevent pressurised foul water from back feeding from the public sewer into the property or its curtilage.
- b. Suitable techniques for “domestic grey water recycling” should be adopted where it will reduce the volume of “buffer” storage required above.
- c. Developers shall ensure that foul and surface water from new development and redevelopment are kept separate. Where sites which are currently connected to combined sewers are redeveloped, the opportunity to disconnect surface water and highway drainage from combined sewers shall be taken.

Supporting Documents

- National Planning Policy Framework: paragraphs 100 - 105:³⁶
- SDC Core Strategy Policy CS.4
- Environment Agency:³⁷ paragraph 8 page vi.
- Stratford-on-Avon District Council, Warwickshire County Council, North Warwickshire Borough Council & Rugby Borough Council: Strategic Flood Risk Assessment³⁸ Historic Sewer Flooding Record Map at Annex A5 (Figure 18).
- Sustainable Drainage Systems: Non-statutory technical standards for sustainable drainage systems, Department for Environment, Food & Rural Affairs March 2015
- Ilmington Neighbourhood Development Plan: Infrastructure September 2017
- Correspondence between Severn Trent Water and Ilmington Parish Council: 2001 to 2017
- Ilmington Neighbourhood Development Plan Survey 2017

Explanation³⁹

- 6.5.1. Because of the village is located at the base of an amphitheatre of Jurassic limestone hills and that most of the village and surrounding areas sit on an impermeable clay substrate, surface water flooding is a recurring problem during prolonged periods of heavy rain. This history of localised flooding events in and around the village, coupled with evidence that climate change – and the accompanying increased expectation of extreme weather

³⁶ For example, see Sustainable Drainage Systems: Non-statutory technical standards for sustainable drainage systems, Department for Environment, Food & Rural Affairs March 2015

³⁷ Environment Agency Report SC30219: 2015

³⁸ URS 2013 Figure A5 Map: Historic Sewer Flooding Records

³⁹ Ilmington Neighbourhood Development Plan: Infrastructure September 2017

events – mean that this is a concern for the village. 50% of respondents to the survey (Q 32) felt that flooding was a problem and 75% felt that sewers and drainage could suffer due to further development (Q33).

- 6.5.2. A recent Met Office report says “.... emerging evidence that, over the UK, daily heavy rain events may be more frequent. What in the 1960s and 1970s might have been a 1 in every 125 days event is now more likely to be a 1 in every 85 days event. This supports other evidence that UK rainfall is increasing in intensity”⁴⁰. This would exacerbate the existing problem.
- 6.5.3. There are particular conditions in Ilmington that explain the need for policies both for pluvial and fluvial flood risk management and foul water drainage.

Pluvial and Fluvial Flood Risk

- 6.5.4. Because the village is surrounded on three sides by hills, rainfall and ground water typically drain into the village and then to the north, generally mainly by way of a stream that runs through the village from south-east to north-west.

Figure 17: Flooding 2018

- 6.5.5. Post 2007 flood alleviation measures appear to have improved matters in the centre of the village. However, the northern part of the village continues to experience periodic, but significant, flooding, for example, at the junction of Mickleton Road, Armscote Road and Front Street. The latest episode occurred in March 2018 (see Figure 17). See Figure 18 for extent of Ilmington village’s surface water flood risk.
- 6.5.6. Additionally, there are numerous water bodies such as ponds, streams and underground springs within and around Ilmington that exacerbate these instances of surface water flooding. Heavy rainfall places the village’s conduit for run off and excess groundwater under pressure.
- 6.5.7. This Policy will ensure that new development will not increase flood risk and where practicable increase the period before rainfall enters existing water courses on new developments.

⁴⁰ Met Office & Centre for Ecology and Hydrology: “The Recent Storms and Floods in the UK”, Feb. 2014

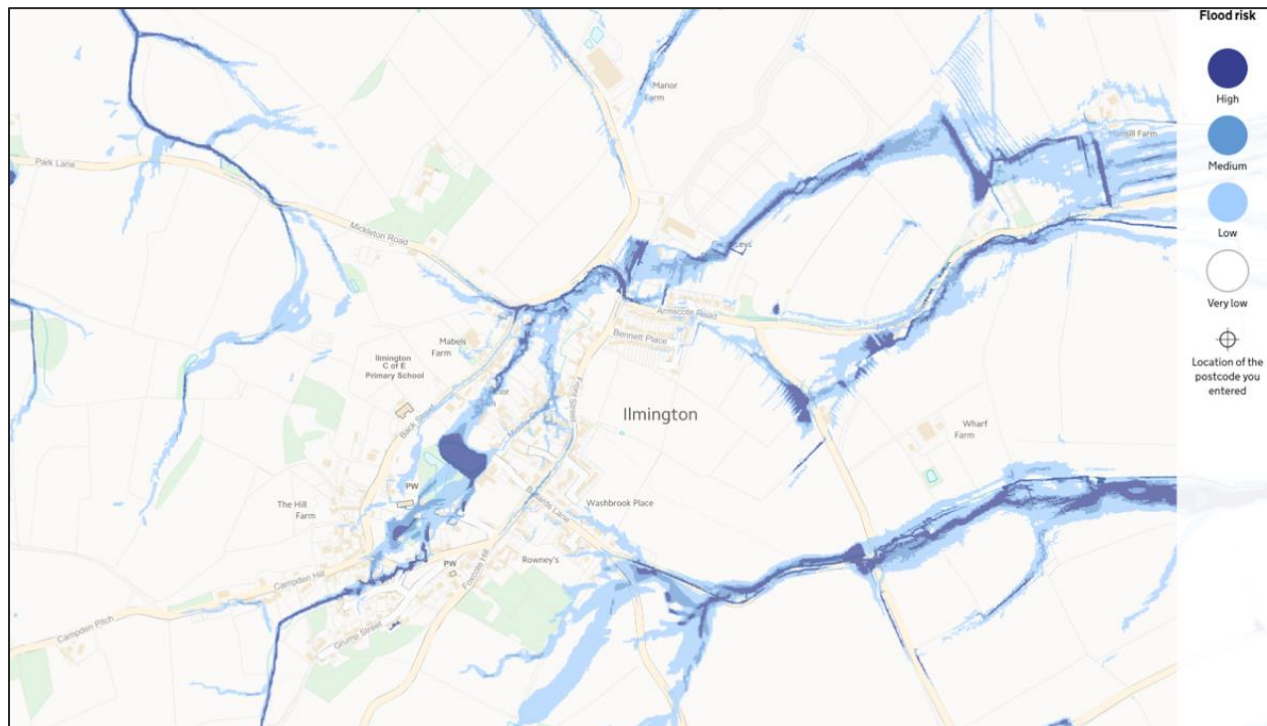

Figure 18: Surface Water Flood Risk in Ilmington⁴¹

Foul Water Drainage

- 6.5.8. The village's foul drainage system drains from south to north with a dedicated Waste Water Treatment Works located close to its north eastern corner. Much of the system is old and designed to drain foul water only. Historically (and prior to more recent changes in Building Regulations) a significant number of properties have roof and garden/driveway drainage connected to the sewer, increasing flow into the sewer.⁴² As this is historic, it is not viable to separate them retrospectively but the legacy is problematic⁴³. Correspondence between Severn Trent Water and Ilmington Parish Council show that, Severn Trent Water Ltd advised the Parish Council that the foul water drainage capacity in Ilmington was inadequate in 2011⁴⁴.
- 6.5.9. Following heavy rainfall, the combined flows repeatedly exceed the system's capacity and result in periodic outbreaks of foul water from the system⁴⁵. Modifications to reduce highways and land drainage have helped to reduce the problem, but the inadequate capacity of the system and its inability to deal with periods of heavy rainfall remain a major issue, something acknowledged by Severn Trent Water Ltd in 2011 and amplified in a 2013 report commissioned by Stratford-on-Avon District Council⁴⁶.

⁴¹ Environment Agency Long Term Flood Risk Information website: <https://flood-warning-information.service.gov.uk/long-term-flood-risk/map?easting=421384&northing=243842&address=100071244246>

⁴⁴ Email 30/06/2011 from Severn Trent Water Ltd to Ilmington Parish Council Clerk

⁴⁵ See regular correspondence between Ilmington Parish Council and Severn Trent Water Ltd 2000-2012

⁴⁶ Water Cycle Study Update Final report by URS Sept 2012, P7

- 6.5.10. Severn Trent Water Ltd have subsequently advised that mitigation measures are sufficient to date⁴⁷ and that upgrades to foul sewerage can be deferred to the next investment period starting in 2020 unless sewer flooding risk is seen to increase or is likely to be put at increased risk through proposed development⁴⁸.
- 6.5.11. Since 2011, there have been 21 planning permissions for residential development without steps to address the inadequate foul water drainage capacity. Any further development should not increase pressure on an already challenged system and new development should not be at risk from flooding – or worse – foul drainage backing up into new or existing dwellings.
- 6.5.12. Stratford-on-Avon District Council, Warwickshire County Council, North Warwickshire Borough Council and Rugby Borough Council: Strategic Flood Risk Assessment Historic Sewer Flooding Record is shown in Figure 18, with a relatively high number of occurrences in and around Ilmington.

6.6 NATURAL ENVIRONMENT

STRATEGIC OBJECTIVES:

As a contribution to a sustainable local natural environment, development should conserve and where appropriate, enhance:

- The natural environment and countryside in the Neighbourhood Area, including natural aquatic habitats
- The tranquility and dark skies that are a characteristic of the Neighbourhood Area

Policy NE.1: Biodiversity, Wildlife and Habitat Conservation and Protection

- Existing ecological networks should be retained and new ecological habitats and networks will be supported and encouraged.
- Measures to improve landscape quality, scenic beauty and tranquility are encouraged.

Supporting Documents

- Stratford-on-Avon District Council Ecological and Geological Study of Local Service Village, Ilmington

Explanation

- 6.6.1. Ilmington is a rural settlement whose surrounding countryside comes into the village in the form of green fingers. The habitat of the surrounding area of the settlement is variable and includes a mix of remnant agriculturally 'semi-improved' neutral grassland, scattered scrub, arable land and improved grassland with linear scrub hedge boundaries.
- 6.6.2. Despite agricultural improvement, areas within and around the village support a rich diversity of wildlife. Various areas are identified as having either high or moderate

distinctiveness meaning that they have ecological sensitivities⁴⁹, including remaining semi-improved neutral grassland, broad-leaved plantations, allotments and orchards.

- 6.6.3. Ilmington has areas of semi-improved grassland including some of which are identified as potential local wildlife sites.⁵⁰ Semi-improved grassland has declined across England primarily to agricultural intensification, and to a lesser extent development, with an accompanying fragmentation that increases the risk of local species extinction in small remnant areas⁵¹. These areas retain a relatively species rich flora and can support many birds and insects⁵².
- 6.6.4. In particular, Humpty Dumpty to the south of the village of Ilmington (also known as the Dairy Ground) is a significant tract of semi-improved neutral grassland on rising land. A number of protected species can be found including “small heath butterfly, large-leaved lime, badger and brown hare plus bat species including common and soprano pipistrelle, brown long-eared, lieslers, noctule, whiskered and brandts bats recorded in the settlement area. In the wider area there is grass snake and the additional rare plant records of common spike-rush and corn buttercup.”⁵³

⁵³ Stratford-on-Avon District Council Ecological and Geological Study of Local Service Village, Ilmington: Item 6 Appendix 17, p223

Policy NE.2: Aquatic Habitats

Where possible, developments that include and / or are adjacent to existing aquatic habitats (such as attenuation ponds, springs, ditches or streams) should be designed in such a way as to enhance the natural environment, encourage biodiversity and create sustainable habitats for local wildlife.

Proposals which have an adverse impact on aquatic habitats will not be supported.

The Ponds, Berry Orchard

- Frog Life website: www.froglife.org/info-advice/frogs-and-toads-behaviour/

Explanation

6.6.5. There are numerous bodies of water such as ponds, streams, underground springs and ditches within the Neighbourhood Area and the geological boundary. One major stream that runs south through the core of village is called Middle Brook. Other streams are unnamed such as those running through Washbrook Place, Compton Scorpion and by Old Junction Cottage on Compton Scorpion Lane.

- 6.6.6. The ponds and streams of Ilmington provide a haven for wildlife and encourage biodiversity. They provide important homes for amphibians, reptiles, insects, mammals and birds.
- 6.6.7. Each spring, frogs and toads cross Ilmington to breed in village ponds and water bodies: many are run over by cars as they do so.
- 6.6.8. Ponds and streams in and around Ilmington village include: (See Figure 19: Pond & Stream Location Map)
- 1) **Newfoundland Well:** The site of Newfoundland Well dates to the Post Medieval period. It is located 800m west of Ilmington. A modern dam has been raised and the well is now within the boundary of a small pond⁵⁴.
 - 2) **Slurry Pond** lies to the NE of Newfoundland Well surrounded by bramble and willow herb
 - 3) **The Pond at the back of Ilmington Playing Fields** is often used by Ilmington's C of E Primary School for their nature studies.
 - 4) **The Fish Ponds:** They are described in the SDC Ecological and Geographical Study as: "Two large mature ponds surrounded by semi-improved grassland with nearby church yard and small fields grazed by sheep in centre of the village... The pond edges are particularly rich in marginal and emergent species...."⁵⁵ Herons, geese and other wading birds are commonly seen at the Fish Ponds.
 - 5) **Middle Brook stream:** This stream runs along Middle Street and through the village south to north.
 - 6) **The Ponds, Windmill Hill**
 - 7) **The Balancing Pond, Wilkins Way**
 - 8) **The old sheep dip along Featherbed Lane across from Washbrook Place**
 - 9) **Wedgnock and Charity Land Springs to the south of the village**

PROJECT:

Projects suggested in evidence gathering include

- To avoid unnecessary killing of frogs and toads when migrating during their breeding season, install discreet temporary signage around the village alerting and asking parishioners and visitors to take care when driving around the village, including on private drives.
- The restoration old sheep dip on Featherbed Lane which is an example of local social history.

⁵⁴ Source: www.ourwarwickshire.org.uk/content/catalogue_her/newfoundland-well-ilmington

⁵⁵ Stratford on Avon District Council Ecological & Geological Study, p.227

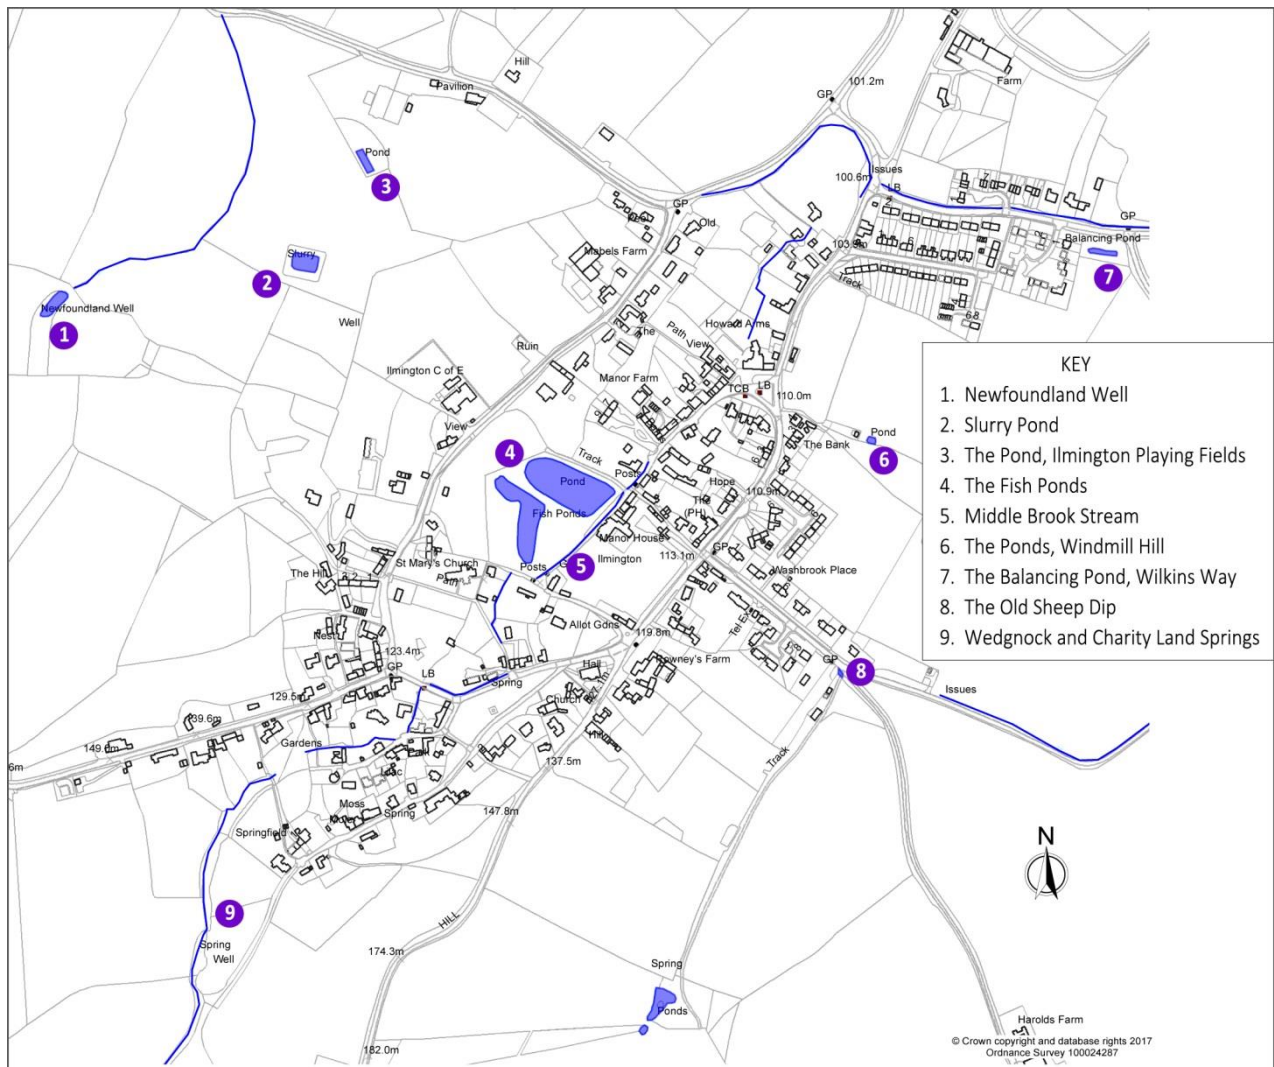

Figure 19: Pond & Stream Location Map

Policy NE.3: Boundary Treatments and Landscaping

Where relevant, details of boundary treatments and landscaping should accompany planning applications for new development and should reflect traditional Parish and village style and characteristics as set out in the Design Principles.

Boundaries and barriers should be made permeable with 13x13cm hedgehog holes at the base.

Connectivity and shelter for ground-dwelling wildlife should be encouraged through the planting and maintenance of features such as native species hedgerows and grassy margins.

Development that affects mature hedgerows should aim to conserve these important natural features.

- Biodiversity 2020: A strategy for England's wildlife and ecosystem services (Paragraph: 017 Reference ID: 8-017-20140306)
- www.gov.uk/guidance/natural-environment

Explanation

Boundaries

6.6.9. Traditional low hedges, hedgerows and dry-stone walls are characteristic boundaries of fields and residences throughout the Neighbourhood Area.

6.6.10. Along with gardens, hedges provide important habitat, food, shelter and breeding sites for wildlife and are important for our overall ecosystem. Hedges “facilitate movement through the landscape for a wide range of organisms”, including flying insects⁵⁶. Gardens provide a habitat for many small mammals and invertebrates which travel between them in search of food and mates.

6.6.11. Solid fencing and stone walls can prevent birds, small mammals and invertebrates from moving freely between gardens forcing them onto road where they are in danger of being hit by moving vehicles. This can be overcome if new developments include wildlife corridors in boundary treatments which would help support, encourage and sustain biodiversity and ecological networks as noted in the Design Principles, Section 7.

⁵⁶ Hedgelink.org

Landscaping

6.6.12. New developments can mean a loss of habitat for many species, some, like the Britain's hedgehog, are in severe decline and are now listed as endangered.

6.6.13. Tree planting is important in providing screening and as a home for wildlife in new developments. The variety of trees within the village adds considerably to the local character and wildlife habitat. "Wildlife, both flora and fauna, is diverse. Oak, ash, beech, sycamore, horse chestnut, lime and willow trees thrive.⁵⁷"

6.6.14. Respondents to the Ilmington Neighbourhood Development Plan Survey were resistant to non-native hedging, trees and conifers when asked: "Should more trees be planted?" (Q.21), 80% of households said 'yes'. The question triggered many comments, 46% of which expressed a preference for broadleaf or indigenous species; particularly Oak, Birch, Beech, fruit trees and Elm. Negative comments focused on not planting of Leylandii (23%) or other large conifers (22%). This is broadly in line with the responses and recommendations found in the Ilmington Parish Plan 2006, p.21

Horse Chestnut Tree on Lower Green

⁵⁷ Ilmington Parish Plan 2006, p.5

Policy NE.4: Allotments and Orchards

The partial or complete loss of orchards, remnant orchards and allotments through development proposals will be resisted.

Supporting Documentation

- Warwickshire County Council: Biodiversity Strategy 2008
- Natural England and Rural Communities Acts 2006: Ch1 p2 2.1, p14 40.1 and 40.3,
- DEFRA: Making Space for Nature 2009

Explanation

- 6.6.1. Ilmington Village is home to many remnant orchards which provide an important habitat to a wide variety of small mammals, insects and invertebrates. (see Figure 20)
- 6.6.2. “The heart of Ilmington, inside the Front Street/Back Street perimeter and protected from through traffic, is our most important environmental asset. Small orchards shelter wildlife and biodiversity and help create the village's green character.”⁵⁸
- 6.6.3. This remains the case: 97% of respondents to the question “should orchards and trees be protected”, answered ‘yes’.⁵⁹
- 6.6.4. Orchards, and more particularly Apple Orchards, are a defining historical characteristic of Ilmington Village. This is exemplified by the Apple Map in St Mary’s Church and the children’s Apple Walk in 2007. The 1922 map they used, Figure 21, shows the amount of Orchard lost since then when compared to Figure 22.
- 6.6.5. Even though the orchards have mainly laid unused with their crop being utilised for individual use, recently cider making as returned to the village with the Grumpy Frog hand crafted cider company producing both cider and apple Brandy from Ilmington apples. The enterprise is based in the village.
- 6.6.6. Remnant orchards are also important. They provide habitats and environments that can support endangered species such as the Noble Chafer beetle. ‘This rare beetle is associated with traditional orchards where it is dependent on old, decaying wood within live trees especially cherry, plum and apple.... These sites are vulnerable to removal or clearance, particularly if the trees are reaching the end of their productive life.’⁶⁰
- 6.6.7. The Woodland Trust report that “Providing habitat for pollinators and for insects and birds that can help with pest management are two potentially key functions for non-cropping trees in orchards. In both cases, much of the value of trees comes from the habitat complexity or heterogeneity they can provide; in terms of physical structure, microclimates, substrates to feed on, and diversification of the timing over which

⁵⁸ Ilmington Parish Plan 2006 p17

⁵⁹ Ilmington Neighbourhood Development Plan Survey 2017 Q20

⁶⁰ People’s Trust for Endangered Species, <https://ptes.org.noble-chafer-beetles/>

resources are provided in the year. It is difficult and costly to replicate this comprehensively through direct or artificial means; which is why ‘semi-natural’ habitats can be so important – a living system to support a living system.”⁶¹

- 6.6.8. Allotments are part of the rural tradition and an important community facility. Demand for them is growing steadily. They make a valuable contribution to biodiversity, sustainability and healthy lifestyles, represent years of public and individual investment, and are worthy of protection.⁶²

⁶¹ Woodland Trust, Trees in Orchards 2013

⁶² SDC Core Strategy Section 3, 3.6.6

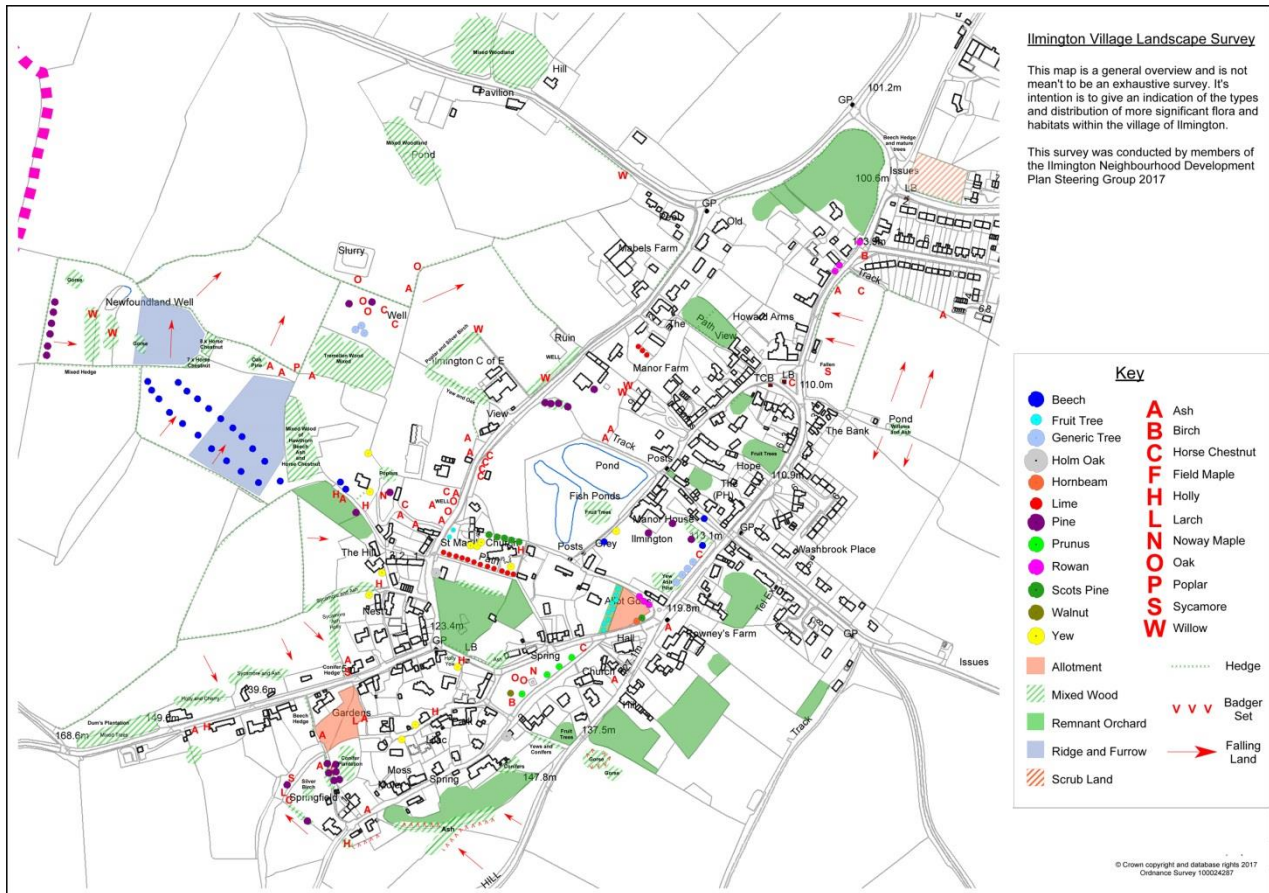

Figure 22: Landscape Survey Map showing Remnant Orchards and Allotments 2017

Policy NE.5: Tranquillity

All new development will be expected to respect the tranquillity of the Neighbourhood Area. Any development which results in excessive noise or detriment to the tranquillity of the environment will be resisted.

Supporting Documentation

- National Planning Policy Framework: paragraphs 115, 123
- SDC Core Strategy: CS.9, CS.11, AS.10, AS.10 Development Management Considerations 19 (p.197)
- Cotswolds Conservation Board Position Statement: Tranquillity and Dark Skies 2010
- Cotswolds AONB Management Plan 2008-2013 Vision: (p.4), LP1, DTP1
- Campaign to Protect Rural England: Saving Tranquil Places, East Midlands Leaflet

Explanation

6.6.9. Tranquillity is defined as the absence of inappropriate noise, development, visual clutter and pollution, “a feeling of being away from it all”⁶³ and is identified as a ‘special quality’ of the Cotswolds AONB.

6.6.10. Those parts of the Neighbourhood Area that are in the Cotswolds Area of Outstanding

⁶³ Cotswolds Area of Outstanding Natural Beauty Management Plan 2008-13 p8 (Footnote 6)

Natural Beauty are defined as a “tranquil area”⁶⁴. The importance of this was reflected in the Ilmington Neighbourhood Plan Survey 2017 with 98% of respondents answered that it was ‘very important’ or ‘quite important’ to “have tranquility and low noise levels in the Parish?”⁶⁵

- 6.6.11. The Government Rural White Paper published in 2000 identified that “there will always be sources of noise in the countryside, and many of these - such as noise from harvesting and livestock - are themselves representative of activities which have long been central to the rural way of life. But protecting the countryside from further intrusion of noise is not a luxury. It is about preserving and promoting a feature that is genuinely valued by residents and visitors alike. Noise can also disturb the breeding of vulnerable species, and thereby undermine biodiversity.”⁶⁶
- 6.6.12. The Cotswolds Area of Outstanding Natural Beauty Management Plan notes that: “Noise and activity arising from developments in the countryside, together with lighting, can have an adverse effect on tranquil and dark sky areas”.⁶⁷ Policy DTP1 states that “development will... Maintain or improve the existing level of tranquility.”
- 6.6.13. An opinion poll commissioned by the Campaign to Protect Rural England (CPRE) in 2006 showed that people valued tranquility the highest as a quality of the countryside above fresh air, scenery and nature.⁶⁸
- 6.6.14. Several academic studies have shown that tranquility helps the economy, is good for our health and reduces stress.⁶⁹

⁶⁴ Core strategy CS.11

⁶⁵ 2017 Ilmington Neighbourhood Development Plan Survey Q22

⁶⁸ Yougov Poll October 2006 / Source Cotswolds Conservation Board Position Statement: Tranquility and Dark Skies: 2010, p2

⁶⁹ Cotswolds Conservation Board Position Statement, Tranquility and Dark Skies, p3

Policy NE 6: Dark Skies

Development will be expected to respect Ilmington's dark skies and will follow the Design Principles for exterior lighting (Section 7.3.5).

Development should aim to minimise light pollution by avoiding obtrusive external property and street lighting.

All applications for new development must demonstrate how the dark skies environment will be protected through the submission of appropriate supporting documentation, to show that they accord with current professional guidance to achieve an appropriate lighting environment for the area. In particular, they should demonstrate that the luminance level and period of illumination are necessary for the lighting to perform its function and that there will be minimal light spillage beyond the property boundary.

In considering applications, parties will be encouraged to assess whether the proposed development could take place without external lighting.

- CfDS Lighting Guidelines: www.britastro.org/dark-skies/pdfs/
- CfDS1703_E5_Good_Lighting_Guide.pdf

Explanation

6.6.15. The Neighbourhood Area is predominantly in a dark sky region⁷⁰ (Figure 23) and has no street lights something strongly valued by parishioners. When asked whether a dark, star lit sky at night was important to them, 95% of respondents to the survey said 'yes'. The same percentage felt that street lighting should be restricted⁷¹.

6.6.16. The impact of light pollution on nocturnal wildlife is widely documented. From moths and beetles to amphibians, the effect of nighttime light pollution is harmful and

⁷⁰ Campaign to Protect Rural England website: <http://nightblight.cpre.org.uk/maps/> Map: © Natural England copyright 2016. Contains Ordnance Survey data © Crown copyright and database right 2016, Earth Observation Group, NOAA National Geophysical Data Center.

⁷¹ Ilmington Neighbourhood Plan Survey 2017 Q19 and Q19a

disruptive and can affect pollination and reproduction^{72 73 74}.

- 6.6.17. “Light pollution of the night sky is an increasing intrusion into the countryside at night, and it is an issue that we want all rural local authorities to take into account in their planning and other decisions. Local planning authorities have powers, for instance, to control many external lighting installations.”⁷⁵

6.7 Economy, Tourism and Local Amenities

STRATEGIC OBJECTIVE:

To sustain and, subject to being consistent with the policies of this Plan, support the development of the diverse local economy and employment opportunities that exist in the Neighbourhood Area, including opportunities for home working.

To sustain and enhance the amenities in the Neighbourhood Area to foster its vibrant community, making it an attractive place for local people and visitors alike.

POLICY ETA.1: Encouraging Local Employment

Developments that provides new, or helps sustain local employment will be supported in principle, providing they are consistent with the other policies in this Plan and:

- a. Are of an appropriate scale
- b. Do not detract from the character, appearance or green infrastructure of the Neighbourhood Area
- c. Do not have a detrimental impact on residential amenity
- d. Do not have an unacceptable impact due to traffic generation

POLICY ETA.2: Home-Working and Internet Connectivity

Development of new dwellings should provide:

- Incorporate cabling or suitable ducting to support high speed broadband
- Connectivity from the dwelling to the roadside
- And are encouraged to provide space to support home-working, with flexible space adaptable to a home office

POLICY ETA.3: Rural Tourism

Proposals for new and improved leisure and tourism based services and facilities within the Neighbourhood Area, including bed and breakfast, will be supported in principle providing they do not conflict with other policies in this Plan.

Supporting Documents

- National Planning Policy Framework: Paragraph 28 (bullet 3)
- SDC Core Strategy Policies: AS10 and CS22
- Neighbourhood Development Plan Survey 2017: Q5 - 7, 36, 42-50

Explanation

- 6.7.1. Economic activity and employment across the Neighbourhood Area is varied and substantial for a community of this size. The survey revealed that there are 45 businesses which are based within the Neighbourhood Area and 61 people indicated that they predominantly work from home. These cover a wide variety of sectors⁷⁶. (Figure 24)

FIGURE 24: Which sector best describes your business activity?	Number
Consultancy	14
Farming / Horticulture	7
Building Trade	6
Arts & Crafts	6
Tourism / Leisure	5
Food / Catering	3
Retail	2
Manufacturing	1
IT / Business Services	1
Other	13

Figure 24: Business Recorded from the Ilmington Neighbourhood Plan Survey 2017

- 6.7.2. These businesses include two pubs (one offering accommodation) and a community owned shop and café (which has 2.2 full time employees and also offers young people employment experience). A 'micro' level to the local economy exists with some businesses being mutually supportive. For example, the community shop sells local products sourced within the Neighbourhood Area, including cider made in the village, greetings cards created by local artists and bird seed sourced from a village supplier.
- 6.7.3. The survey asked **all** households (as opposed to businesses) about business and employment needs in the Parish with responses as follows:
- 47% felt there should be an improvement in, or the need to develop, tourism in the Parish.
 - 64% felt there was a need to encourage more local jobs.
 - 56% wanted more local business to be encouraged in the Parish.
- 6.7.4. 36 business-only respondents in the survey felt that poor broadband or mobile phone reception was a difficulty.

⁷⁶ Ilmington Neighbourhood Plan Survey 2017 (Q6)

- 6.7.5. Connectivity to efficient telecommunications is therefore an important issue for the Neighbourhood Area, including access to high speed broadband. Having a significant number of businesses and home-workers based in the Parish—reduces outward commuting and unnecessary private car journeys and hence promotes sustainability. It helps to sustain both a balanced age structure in the community and stimulates the growth of the local economy.

Policy ETA 4: Sustaining Local Amenities

The loss of existing community facilities will be resisted unless it can be demonstrated that the facility is no longer viable or that the facility is no longer in active use and has little prospect of being brought back into use.

Proposals which enhance and improve existing community facilities will be supported.

- Ilmington Neighbourhood Plan Consultation Workshops: September 2016
- Cotswold Information website: www.cotswolds.info/places/ilmington.shtml
- Apple Walk Flyer 2007

Explanation

- 6.7.6. As the sole significantly sized settlement in the Neighbourhood Area, Ilmington is an unspoilt Cotswold village with attractive views, hills and footpaths that is also a popular destination for tourists, cyclists, walkers and dog walkers.
- 6.7.7. In a rural Parish of approximately 740 people, the extent of amenities and organised activities is substantial, and they are used by people in other local communities outside of the Parish. Neighbourhood Area amenities and organised activities are described in more detail in Figure 25 but include two successful public houses, a popular community shop and café, playing field, playground and village hall.
- 6.7.8. Parishioners place a high value on these amenities and of the contribution that they make to the quality of village life⁷⁷. For example, the Survey showed frequency of use for some

⁷⁷ Analysis of responses to initial Ilmington Neighbourhood Plan ‘mini survey’ August / September 2016

Policy ETA 5: Safe Walking and Cycling

The Neighbourhood Area has a wealth of public rights of way which should be enhanced and positively utilised in all new development.

As appropriate, development must demonstrate how walking and cycling opportunities have been prioritised and connection made to existing routes. Proposals which either adversely affect existing walking and cycling routes or does not encourage appropriate new walking and cycling opportunities will not be supported.

Supporting Documents

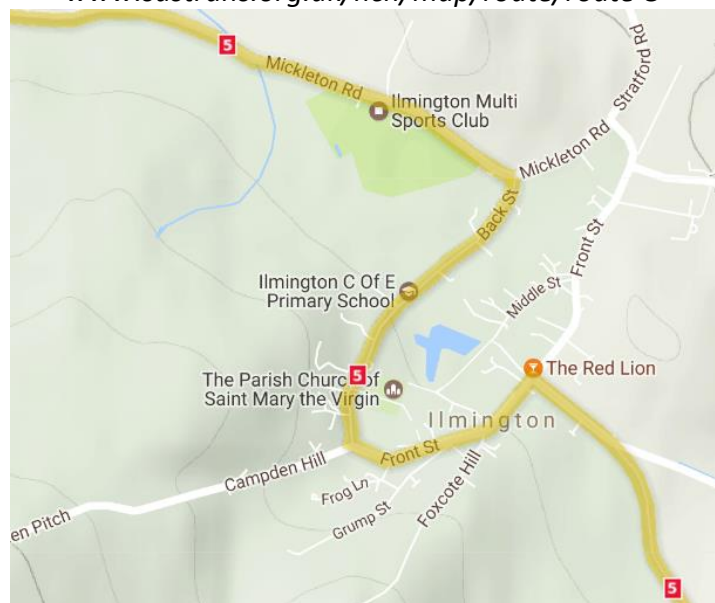

- Survey of Playing Field User Groups on behalf of Ilmington Parish Council, 2015

- Ilmington Neighbourhood Development Plan Report: Ilmington Amenities, June 2017
- Ilmington Parish Plan 2006, p.18

Explanation

6.7.10. The village of Ilmington is noted for the numerous footpaths that criss-cross the village. With the help of Cotswold Warden volunteers, these have been actively maintained.

6.7.11. Many of these paths lead to the wider countryside found in the Neighbourhood Area and beyond which are enjoyed by ramblers, dog walkers and runners: “To the south many paths rise on limestone grassland to the Foxcote estate, Ilmington Downs and beyond into Gloucestershire.”⁸¹ The Warwickshire’s Centenary Way traverses the village. “There are 38 public rights of way in the Neighbourhood Area: 29 are designated footpaths (for walking) and nine are bridleways (for horses and pedal cycles). See Figures 26 and 27.

*Figure 26: National Cycle Network Route 5:

6.7.12. Because of the height of the surrounding hills, many cycling clubs use the National

⁸¹ Ilmington Parish Plan, 2006 p.18

Cycle Network Route 5 Figure 26. Throughout the year both cycling and race events are organised to go through the village into surrounding countryside. In 2016, alone, the Aviva Women's Cycle Tour, the Tour d'Ilmington Charity Race (by the Heart of England Cycling Club), the Women's Warwickshire Race and Tempo Events Winter Series all came through the village.

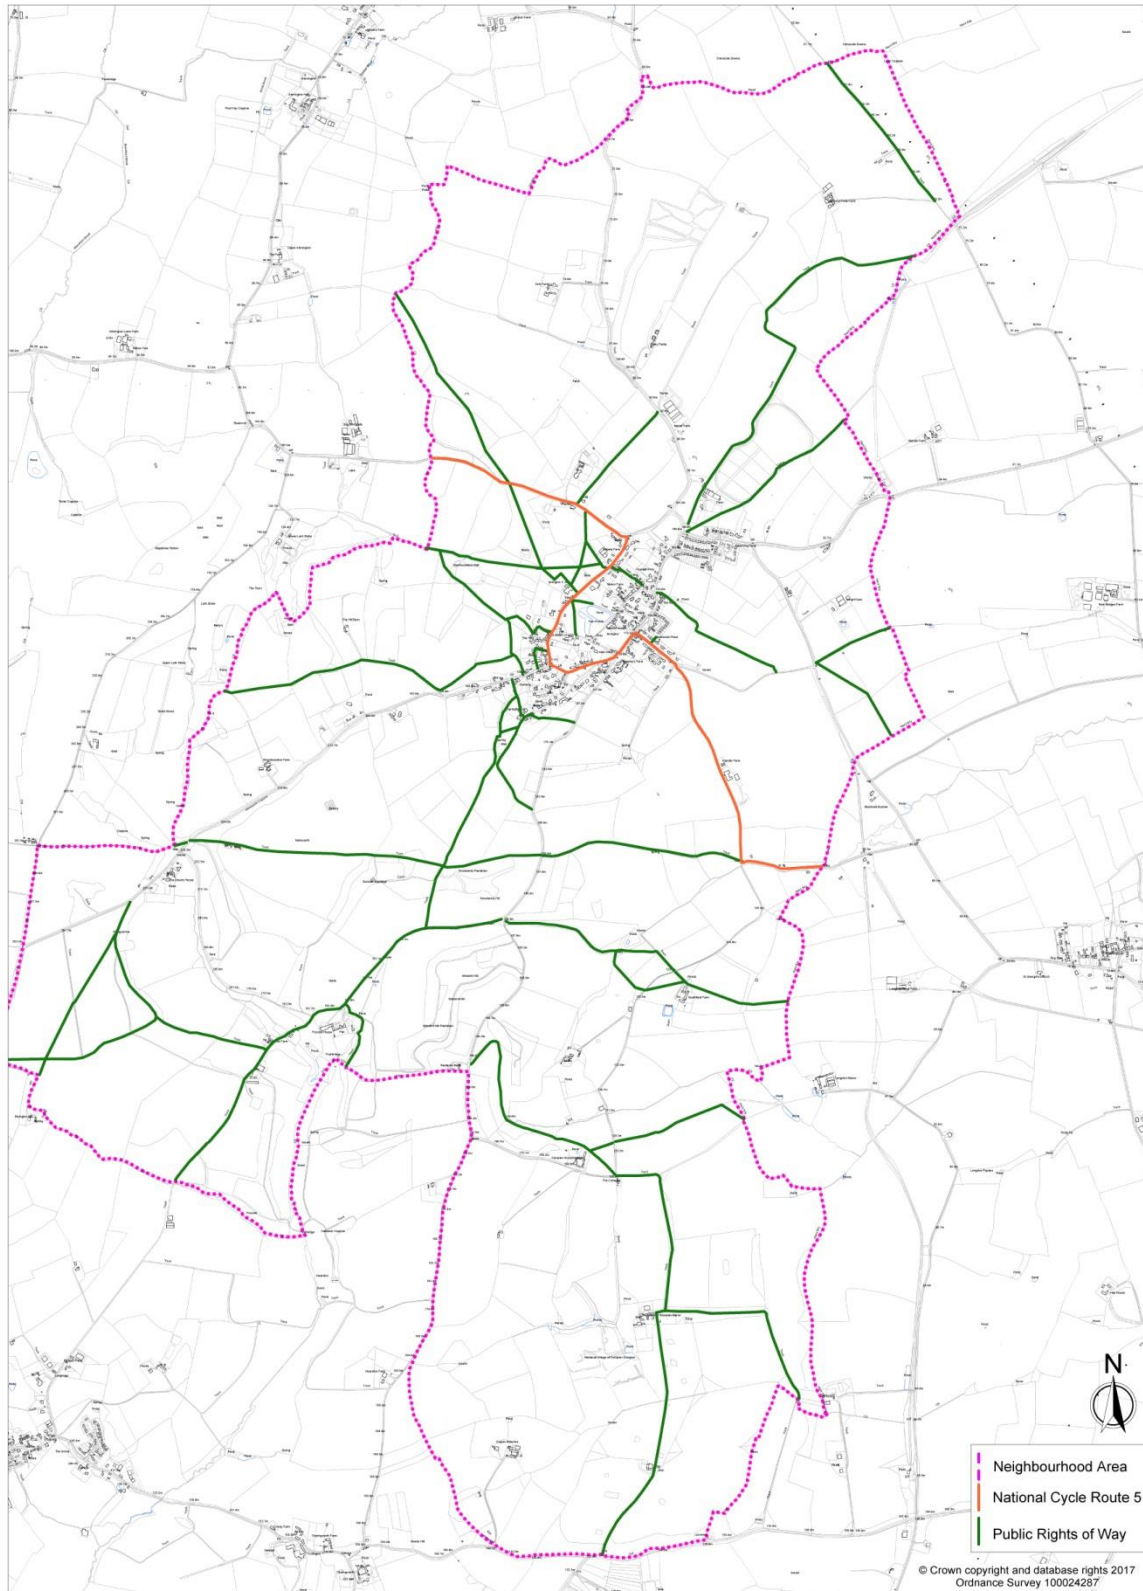

Figure 27: Footpath and Cycle Route Map

7. DESIGN PRINCIPLES

The following guiding design principles will be taken into account for all new development within the Neighbourhood Area. All proposals will be expected to demonstrate how these principles have been incorporated into the design of the scheme. Proposals which fail to satisfactorily take into account and implement these design principles will not be supported unless there is significant justification which indicates otherwise.

7.1. GUIDING PRINCIPLES

- 7.1.1. The rural character of Ilmington should be preserved and urbanisation avoided.
- 7.1.2. The landscape setting should be preserved, protecting views into, out of and within the village.
- 7.1.3. The important balance between open and built areas should be maintained.
- 7.1.4. The location of new housing or other development should not compromise the open character of the village including significant views and aspects
- 7.1.5. New building, including extensions, conversions and alterations, should be in sympathy with local building styles and materials
- 7.1.6. Innovative design where appropriate

7.2. NEW DEVELOPMENTS

7.2.1. Design and Layout

- a. The layout of new groups of housing should respect the village tradition. For example, short terraces or mews arrangement would be more appropriate than conventional estate layouts which are more suited to suburban or urban areas.
- b. New buildings should reflect the local context in materials, design and layout.
- c. New development proposals should, where applicable, allow for the retention of open space between buildings to retain balance and to protect existing views within the village of Ilmington and out into the open countryside.

Dower House, Back Street

View from Upper Green along Front Street

Wilkins Way

Lower Green

7.3. DETAILS AND MATERIALS (See Appendix 4 for photographic examples)

7.3.1. Joinery within the conservation area must be of a traditional design and proportional to the property, especially on the front elevation.

7.3.2. Materials

- a. The predominant building material is ironstone although there is some multi-tonal red brick particularly in 19th Century buildings.
- b. The local tradition is for stone buildings to be built in coursed, squared or random rubble with variation in the course depth and with quoins of larger stones.
- c. New buildings should be predominantly in ironstone, though some dwellings or parts of dwellings can be in brick.
- d. Brick should be local multi-tonal red.
- e. Houses should be in dressed and not reconstituted stone.
- f. Pointing should be flush and mortar unobtrusive.
- g. Extensions and conversions of brick buildings should use materials that match the original.
- h. Stained or natural timber should be used sparingly and clad horizontally

7.3.3. Roofs and Chimneys

- a. Ilmington has a varied roofline and traditional roofs are steeply pitched with chimneys at the gable ends.
- b. Roofing materials are mainly stone, slate or clay tiles with some thatch.
- c. New roofs should reflect the local tradition in pitch, variety and detail, including construction details such as stone parapets or brick corbelling below the eaves. A variety of roof heights will be encouraged.
- d. Chimneys will be preferred as an element of new designs, with variety encouraged on larger developments.
- e. Roofing materials should be thatch, slate, stone or high-quality reproduction stone slates, plain clay tiles or concrete tiles of suitable pattern.
- f. Red or pink tiles are not in the local tradition and their use should be discouraged.

- g. Roofs must be in the range of 45 to 55 degree pitch, depending on the type of covering to be used.

7.3.4. **Doors, Windows and Roof Lights**

- a. Dormers and roof lights should not dominate and dormers should be designed to reflect local styles and proportions.
- b. Windows and doors in new developments, older buildings and extensions should reflect the local styles and proportions found in the conservation area as well as local details such as arched lintels.
- c. Traditional sustainable materials or sympathetic modern equivalents should be used in replacement doors and windows in older dwellings. Original design details should be replicated as far as possible in alterations, repairs and extensions.

7.3.5. **Exterior Lighting**

- a. External lighting installations on new developments, extensions and conversions should be in line with the following recommendations and follow the basic guidance that the exterior lighting luminance level and period of illumination should be the minimum necessary producing the minimum spill beyond the property boundary:
 - 1) Lighting fixtures should be modern full cut-off, energy efficient lights, fitted with shields where light intrusion is a possibility.
 - 2) Exterior lighting should be of a Colour Temperature of 3000°K or below, for example warm white to minimise the impact on nocturnal wildlife⁸².
 - 3) Lighting fixtures should be fitted with automatic controls, such as motion sensors or timers that allow the illumination period to be set to the minimum necessary to allow the light to fulfil its function.
 - 4) The nightly exterior illumination of dwellings for extended periods will be strongly discouraged.
 - 5) Exterior lights should be of the minimum luminosity required to fulfil their function.
 - 6) Lighting scheme designs should demonstrate the intention of minimising the stray light into nearby premises, the surrounding countryside and the night sky.

7.3.6. **Energy Efficiency**

- a. 'Eco-housing' should reflect the local context in materials, style and layout.

7.4. **EXTENSIONS AND CONVERSIONS**

7.4.1. **Scale and Design**

- a. Extensions should be subservient to the main building and reflect its character, scale and style and where appropriate the immediate street scene and neighbouring

⁸² Lighting Guidelines, Commission for Dark Skies, www.britastro.org/dark-skies

properties' vernacular.

- b. Extensions should be in proportion to the original building and size of the site.
- c. Conversions should retain the character of the original building including distinctive features. Facades should be altered as little as possible.

7.4.2. **Materials**

- a. Stonework and brick work should be matched with the original in style and colour.
- b. Stained or natural timber should be used sparingly and clad horizontally as part of detailing.
- c. Stained or natural timber may be used for agricultural conversions and ancillary buildings such as shed and car ports and should be clad horizontally.

7.4.3. **Agricultural Buildings**

- a. New agricultural buildings should be designed and sited to respect the character of the area and blend into the landscape or be screened with appropriate trees.

7.5. **ROADS & HIGHWAYS**

- 7.5.1. Flexible approaches to highway engineering and the use of material to reflect the rural character of Neighbourhood Area will be encouraged.

7.5.2. **Footpaths and Pavements**

- a. New pavements should be constructed in the local tradition i.e. granite kerbs with a tarmac surface.
- b. Repairs should use durable materials.
- c. Treatment to the edges of verges or open areas to prevent vehicle damage should use traditional materials appropriate to the setting.
- d. Replacement kissing gates within the village should preferably be in wood.
- e. Large areas of hard surfacing should be avoided but where appropriate the use of granite setts and Cotswold stone chippings is preferable to concrete and tarmac
- f. New developments should incorporate extensions to the existing footpath network

7.6. **BOUNDARIES & LANDSCAPE**

- 7.6.1. Boundary treatments and landscaping contribute to the character of the village. There is a tradition of low stone walls and boundaries that allow views across the village and to valued landscapes.
- 7.6.2. Where culverts are required, stone headwalls should be incorporated, if only as a facade.
- 7.6.3. Riparian owners are encouraged to contribute to enhancing the stream and its

surroundings.

- 7.6.4. Boundary and surface treatment in new developments should be rural in character and hard paving avoided to help prevent drainage run off.
- 7.6.5. Landscape plans should be included in development proposals where appropriate with details of boundary treatments and landscaping accompanying planning applications for new development.
- 7.6.6. Open views should be created or maintained.

7.6.7. **Trees**

- a. Tree planting of native species is encouraged and new woodland should avoid species such as laurel, which are not appropriate to the Cotswolds.
- b. Planting of vigorous conifers, such as leylandii, are not appropriate.
- c. The planting of trees and hedges is welcome but care should be taken not to obscure valued views.
- d. New development should avoid encroaching on the root protection zone of mature or established trees or require lopping to a degree that would materially hinder the future growth of the tree.

7.6.8. **Walls, Hedges and Fencing**

- a. Boundary treatments should reflect village traditions and characteristic styles and comprise:
 - 1) Low walling of Cotswold stone or exceptionally, multi-tonal red brick
 - 2) Fencing of typically rural styles such as hurdler, chestnut, wrought iron, post and rail rather than sub-urban styles such as feather panels, steel and larchlap.
 - 3) Newly planted hedges of native species that are characteristic to Ilmington such as hornbeam, hawthorn, blackthorn and beech. Non-native conifers such as leylandii are not appropriate.
- b. Stone walls should be repaired in traditional style.
- c. Newly created fencing and walls should have small openings at the base where gardens adjoin to enable small mammals to pass through.
- d. Established hedgerows should be preserved unless there are exceptional reasons justifying their removal.

7.7. **HERITAGE FEATURES AND SIGNAGE**

- 7.7.1. Heritage details and artifacts such as the old fingerposts, gate piers, wellheads and monuments should be preserved and restored.
- 7.7.2. Signs should be kept to a minimum but new signs, monuments or street furniture should be well designed and located to avoid clutter and an urban effect.

ANNEX 1: Evidence Gathering and Consultation Summary

Core Sources of Evidence Gathered and Used in Creating this Plan
and Details of Public Engagement and Consultation Conducted During the Plan Preparation.

THEME	EVIDENCE
Population and Housing	<ul style="list-style-type: none"> • Housing numbers and locations: These were garnered from a combination of the Stratford-on-Avon District Council Electoral Roll and the Ilmington Directory • Population: 2011 Census • Housing Needs: January 2017 Main Survey, Housing needs section • Calls for Sites: 1 December 2016 – 31 January 2017 and 15 June, 2017 – 31 July 2017. Both calls for sites were widely publicised in the Parish and in the Stratford Herald Parish Pump. • Ilmington Neighbourhood Plan Steering Group Site Assessments, 21 May & 12 August 2017: The Steering Group assessed all site put forward in the Call for Sites. The sites were assessed on criteria derived from Ilmington's parish-wide survey responses on what the parishioners identified as important to them. • Independent Planning Consultant's report on all sites put forward: The reports assessed each site based on Stratford District Council's Core Strategy, national & local planning policy and highways guidance. • Ilmington Neighbourhood Plan Steering Group Site Assessment Report: This report makes final recommendations by drawing together the strands of the public consultations, the Steering Group's and independent planning consultant's assessments.
Character and Setting	<ul style="list-style-type: none"> • Ilmington Conservation Area Review: SDC August 1995 • Stratford District Council broadsheet: issued to households in the Conservation Area in 1998 • Ilmington Parish Plan 2006 (including Village Design Statement) • Discussions with community groups: Wednesday Club, Ilmington 20:20 and the Horticultural Society (October 2016) together with public workshops (24th and 28th September 2016) • Heritage and Built-up Environment Neighbourhood Plan Sub-Group Report: Reviewed the findings of the conservation reports and evidence from the public events including on-site assessment • Heritage and Built-up Environment Neighbourhood Plan Sub-Group Design Statement: This statement pulls together research by the group, previous information from Ilmington's Parish Plan and Conservation Officer Report (2006), local and national planning policy and responses from Ilmington's Parish-wide survey (2016). • Mapping: Maps have been produced showing key boundaries and areas, including: Parish, AONB, Conservation Area, listed buildings, proposed local heritage assets, open spaces, flood risk, submissions for call for sites, historic environmental assessment

	<ul style="list-style-type: none"> • Historic Research: Consultation with local archaeologist, January 2017 <ul style="list-style-type: none"> ○ https://historicengland.org.uk/sitesearch?version=beta&terms=ilmington&pageSize=undefined&searchtype=sitesearch • Photographic documentation: Photographs documenting green spaces, potential development sites and important views in, out of and through the village • Research papers by Dr Brian Meredith: A desk-based study of the historical settlement pattern of Ilmington (May 2009 / Arch 2010) and A Report on Artefacts and Iron Age and Romano-British site on Ebrington Hill
Wildlife and Nature Sites / Biodiversity	<p>Ilmington Neighbourhood Planning Steering Group Natural Environment Appraisal: The appraisal assessed Ilmington's wildlife habitats, hedges & gardens, trees, orchards, allotments, tranquillity, dark skies and blue infrastructure. A full list of references drawn on for the report can be found in its appendix.</p>
Community Facilities and Amenities	<p>Ilmington Neighbourhood Planning Steering Group Amenities Report: The report covers Ilmington's Footpaths and Cycling Routes, Playing Fields, Village Hall, Community Shop and Café, Pubs, St Mary's Church, Upper and Lower Greens, Ilmington Church of England Primary School, an village communication vehicles, Mobile Library, Defibrillators, Mabel's Farm Milk. A full list of references drawn on for the report can be found in its appendix.</p>
Business, Tourism and Employment	<ul style="list-style-type: none"> • Business and Employment in Ilmington: 2017 Parish Wide Neighbourhood Development Plan Survey, Business section • Howard Arms: Feb-Aug 2016 Room Night & Food/Beverage Covers Graphs
Transport & Infrastructure (Incl Flooding)	<p>Ilmington Neighbourhood Planning Steering Group Infrastructure Report: The report assessed the infrastructure found in Ilmington based on documentation including Ilmington's drain/sewer map and the Parish Council's correspondence with Severn Trent.</p>
Public Notices and Consultation	<p>Notices and Flyers: The avenues used by the Neighbourhood Steering Group for conveying information to the public includes:</p> <ul style="list-style-type: none"> • Six Parishes Magazine: Published monthly and delivered to every household in the Parish • Ilmington Parish Council Website: Link to Ilmington Neighbourhood Plan web pages (www.ilmington.org.uk/parish_council.html) • Ilmington Neighbourhood Development Plan web pages: Posted minutes, agendas, contact information, events, flyers and surveys (www.ilmington.org.uk/parish_council/neighbourhood_plan1.html) • Ilmington Parish Council Noticeboards: there is one at each end of the village • Ilmington Neighbourhood Development Plan Facebook page: https://en-gb.facebook.com/ilmingtonplan/

- Community Shop: Ilmington Parish Council suggestion box which has a leaflet holder and two notice display areas
- Stratford Herald newspaper

Consultations, Workshops and Exhibitions

- **Neighbourhood Plan Coffee Morning, 14th & 15th November 2015:** Ilmington Parish Council hosted an exploratory workshop and exhibition in the Village Hall to inform parishioners about the Neighbourhood Plans in general and to gauge their interest in pursuing one.
- **Ilmington Shows, August 2016 & 2017:** Exhibition hosted and manned by Ilmington Neighbourhood Plan Steering Group.
- **Evidence Gathering Workshop 1 - 24th & 28th September 2016:** Ilmington Neighbourhood Plan Steering Group hosted workshops and exhibitions in the Village Hall and Community Shop Café to explore what parishioners regard as important and defining characteristics about the village and wider parish.
- **Evidence Gathering Workshop 2 – 9th & 12th, March 2017:** Ilmington Neighbourhood Plan Steering Group hosted workshops and exhibitions in the Village Hall designed to feedback to parishioners the results of the main survey and to receive detailed parishioner feedback on sites put forward for future development and possible local green spaces and views to be protected.
- **Evidence Gathering Workshop 3 – 10th & 14th September 2017:** Ilmington Neighbourhood Plan Steering Group hosted workshops and exhibitions in the Village Hall designed to feedback to parishioners the results of the main survey and to get parishioner feedback on additional sites put forward for future development.

Surveys

- **Initial Survey, November 2015:** Survey to gauge parishioner interest in pursuing Neighbourhood Plan and/or volunteering to be on a steering group. The surveys were given out at the 14th and 15th November 2015 workshops held in the Village Hall and placed in Community Shop.
- **Quick Question Survey, August - September 2016:** A brief 3 question, Quick Question Survey designed to help guide the Ilmington Neighbourhood Plan Steering Group on areas to be covered in the main community survey. The surveys were handed out at the Ilmington Show, placed in the Community Shop and the Parish Council website, the Ilmington Neighbourhood Plan Facebook page and delivered to every household via the Six Parishes Magazine.
- **2017 Parish Wide Neighbourhood Development Plan Survey:** Delivered to every household by volunteers on the 21st and 22nd of January 2017. Completed surveys were either put in the Parish Council suggestion box by 10th February 2017 or collected by volunteers 11th/12th February 2017.

APPENDIX 2: Valued Landscapes and Associated Views

1. From Hill Field above Hill Farmhouse looking east

2. From Pig Lane looking north

3. From Foxcote towards Blackwell and Edgehill

4. From Foxcote Hill looking northwest across the village

4. From Foxcote Hill looking north

5. Across Upper Green from Community Shop

6. Toward St Mary's Church down Peggy's Lane

7. Along Front St looking South toward Foxcote Hill

8. Berry Orchard from Back Street

8. Berry Orchard from Middle Street

9. From Lower Green looking up Middle Street

10. From Lower Green and Front Street to Kyte Hill

APPENDIX 3:

OVERVIEW

Most of the sites listed below are in the AONB/Conservation Area and are noted in important views as identified in the 1996 Conservation Area Review report as well as the research done for the 1997 Ilmington Parish Plan and by the Heritage & Built-Up Environment Ilmington Neighbourhood Plan Sub-Group. Additionally, most of these sites are either remnant orchards, large gardens, rising land/hills or public spaces (such as playing fields). They add to the open mosaic and views that characterise the village of a mix of houses, footpaths as well as open spaces and views.

1. Ilmington Playing Fields & Playground

The special qualities of the site include its recreational value for community events, sports, playground and the annual village show. It's unrestricted ease of public access for formal and informal recreational use including dog walking and the annual village show.

The site sits in the AONB and is demonstrably special to the local community as evidenced by the high score in March 2017 community workshop consultation and important views noted by Parish Plan research. The site is locally significant because it is well used and valued by the local community as a formal area of open space.

2. Kyte Hill / Windmill Hill

The special qualities of the site, in particular the western parcel of land adjoining Front Street and the conservation area, include its visual amenity, historic value and archaeological

importance. There is Geophysical Survey evidence of an Iron Age Farmstead and the site is in the process of being registered with the Historic Environments Records.

The site provides a strong contribution to local character and distinctiveness due to its natural beauty. There are also unrestricted views from the public footpath (Warwickshire Centenary Way). There are commanding views over Ilmington from the site which is in itself imposing with rising land over the setting of the village and Grade II listed buildings in Front Street (Hobdays, Hobdays Barn and The Stable Barn).

The site is locally significant because it is highly appreciated and valued by the local community as an undeveloped tranquil area of open land rising above the village and which makes a strong contribution to the local character and the village's setting.

3. Middle Meadow Garden, Front St/Middle St

The site sits within the conservation area and AONB and forms the setting of the Grade II listed Middle Meadow. The site represents part of Ilmington's open weave layout with remnant orchard trees in the eastern portion.

The special and unique qualities of the site include its open contribution to the centre of the village and more importantly its historic link to one of the last remaining Burgage plots in the village. A Burgage plot is a medieval land used to describe a house on a long and narrow plot of land. The development or sub-division of Burgage plots to address population growth over the last century has led to a rapid decline in this historic settlement pattern.

Important views into the site were noted by the Heritage Sub-Group for its natural beauty and local historic character and value.

4. Berry Orchard / Fish Ponds (Between Back Street and Middle Street)

The site sits within the conservation area and AONB. The special qualities of the site include its recreational value along public access routes which are extensively used by parishioners, dog walkers and ramblers and consequently the site provides recreational value and an area of

tranquillity and attractive scenery for villagers to enjoy. It is also used for grazing sheep for part of the year and occasional community events.

The site is highly regarded for its natural beauty, wildlife and important natural and open views. There are views through the site to Kite Hill on Front Street (a valued feature of Ilmington noted by Parishioners in the NDP March workshop community consultation).

The site forms part of Ilmington's open weave mosaic pattern and setting of Grade II listed buildings (Ilmington Manor and Wharf Farm) in Middle Street. The site has historic significance as an important open space which contributes to the setting of the listed church, the conservation area and the character of Ilmington and Middle Street in particular. Archaeologically, the site is important because it is the site of the original manor and the L shaped medieval fish ponds. The remnants of the moat lie underneath the ponds. (HER Ref: MWA5305 & MWA2705).

The site is demonstrably special and of local importance to the community as evidenced by the high score in March workshop community consultation.

5. Field on Back St (*between Dower House and the three cottages: Yew Tree, Mary's Cottage and The Glen*)

The site sits within the conservation area and AONB. It's special qualities of the site include its important open setting between Grade II listed buildings and its strong contribution to the village's open weave character and distinctiveness due to its natural beauty.

community as an undeveloped tranquil area of open land rising above the village and contributing to its setting.

The site is locally significant because it is highly appreciated and valued by the local community as an undeveloped tranquil area of open land rising above the village and contributing to its setting.

6. Clifford Orchard (*bordering Back St and Peggy's Lane*)

The special qualities of the site include its important open setting between Grade II and Grade I listed buildings, including the Grade I listed, St. Mary's Church. It contributes strongly to local character, the conservation area and AONB. It is distinctive due to its natural beauty as the last remaining orchard in the village's built area. Small orchards shelter wildlife and biodiversity and help create the village's green character'. Old orchard trees also provide an ideal habitat for the

Nobel Chafer which is a protected species. The importance of the site is noted in 1996 Conservation Area Review and Parish Plan.

The site is locally significant because it is highly appreciated and valued by the local community as an undeveloped tranquil area of open land close to the heart of the village and which contributes to its green setting and respects its open weave layout. Its importance to the community is evidenced by it scoring highly in the March workshop consultation.

7. Combined Area Front Street:

The Pound, the Allotments and the Remnant Orchard between the Rectory and the Allotments

The special qualities of the site include its important open setting within the conservation area and AONB. It contributes strongly to local character and distinctiveness due to its natural beauty. The site is part of Ilmington's historic heritage, 'The Pound' being in use prior to 1680. The allotments and

orchards are part of Ilmington's rural tradition, sustainability and biodiversity as demonstrated in our annual Horticultural Show. Old orchard trees provide an ideal habitat for the Nobel Chafer which is a protected species. The site is locally significant because it is highly appreciated and valued by the local community as an undeveloped tranquil area of open land in the heart of the village and which contributes to its green setting and respects its open weave layout.

8. Land SE of Grump St behind Crab Mill & Crab Mill Cottage

The site sits within the conservation area and AONB. The special qualities of the site include its important open setting within the conservation area and its strong contribution to local character and distinctiveness due to its natural beauty and setting for wildlife. The site also forms part of the setting and character of Crab Mill, a Grade II listed building.

The character of Grump Street is a mix of open and built areas. This side of the street has dwellings separated by large

open areas and it is this quality that gives the street its distinctiveness. It is in a prominent position at the base of the Cotswold Scarp.

The site is locally significant because it is highly appreciated and valued by the local community as an undeveloped tranquil area of open land within the village and which contributes to the village's green, open weave character.

9. Wilkins Way Greens

The special qualities of the site include its important open setting within the Wilkins Way development and its contribution to local character and distinctiveness due to its open aspect and views to Kyte Hill.

It is important that new development in the village is designed and laid out to contribute to the overall character of the village. This includes maintaining pockets

of open land within and on the edge of the village. As such, it preserves and extends mix of open mosaic of green spaces and built-up area. It also provides a safe place for young children to play within the development. The site is locally significant because it is highly appreciated and valued by the local community as an undeveloped tranquil area of open land within the new development.

10. Clifford Allotments (*just beyond the end of Frog Lane*)

The special qualities of the site include its important recreational use as community allotments, its high amenity value being adjacent to two significant public footpaths and its contribution to local character and distinctiveness due to its open aspect.

The site is locally significant because it is highly appreciated and valued by the

local community as a community allotment garden for its contribution to sustainability and as undeveloped tranquil area of open land which adds to the village's green setting.
